Preface	iii
1 <i>The Classical Simple Groups</i>	1
1.1 Introduction	1
1.2 The linear groups	2
1.3 The symplectic groups	3
1.4 The orthogonal groups	4
1.5 The unitary groups	7
1.6 The orthogonal groups in characteristic 2	8
2 <i>Weyl Groups</i>	12
2.1 Systems of roots	12
2.2 The length function	18
2.3 A geometrical interpretation of the fundamental systems	20
2.4 Definitions by generators and relations	23
2.5 Parabolic subgroups of a Weyl group	27
2.6 The Coxeter complex	30
3 <i>Simple Lie Algebras</i>	33
3.1 Lie algebras and subalgebras	33
3.2 The Cartan decomposition	35
3.3 The roots of a simple Lie algebra	36
3.4 The Dynkin diagram	39
3.5 The existence and isomorphism theorems	41
3.6 Description of the simple Lie algebras	43
4 <i>The Chevalley Groups</i>	51
4.1 Properties of the structure constants	51
4.2 The Chevalley basis	55
4.3 The exponential map	60
4.4 Algebras and groups over an arbitrary field	62
4.5 The groups $A_1(K)$	65

5	<i>Unipotent Subgroups</i>	68
5.1	The subgroups U, V	68
5.2	Chevalley's commutator formula	71
5.3	The structure of U and V	77
6	<i>The Subgroups $\langle X_r, X_{-r} \rangle$</i>	81
6.1	The group $SL_2(K)$	81
6.2	The homomorphism from $SL_2(\mathbb{C})$	83
6.3	The homomorphism from $SL_2(K)$	87
6.4	The elements $h_r(\lambda)$ and n_r	92
7	<i>The Diagonal and Monomial Subgroups</i>	97
7.1	Properties of the subgroup H	97
7.2	Properties of the subgroup N	101
8	<i>The Bruhat Decomposition</i>	104
8.1	Bruhat's lemma	104
8.2	Groups with a (B, N) -pair	107
8.3	Parabolic subgroups	111
8.4	A canonical form	114
8.5	The Levi decomposition	118
8.6	The finite Chevalley groups	120
9	<i>Polynomial invariants of the Weyl group</i>	123
9.1	The algebra of polynomial invariants	123
9.2	A theorem of Chevalley	125
9.3	The degrees of the basic invariants	129
9.4	A theorem of Solomon	135
10	<i>The Exponents of the Weyl Group</i>	145
10.1	A theorem of Weyl	145
10.2	A theorem of Macdonald	151
10.3	The class of Coxeter elements	156
10.4	A dihedral subgroup of the Weyl group	158
10.5	Eigenvalues of the Coxeter elements	161
10.6	A theorem of Coleman	166

11	<i>Further Properties of the Chevalley Groups</i>	170
11.1	The simplicity of the Chevalley groups	170
11.2	Classical Lie algebras in matrix form	176
11.3	Identifications with some classical groups	183
12	<i>Generators, Relations and Automorphisms in Chevalley Groups</i>	189
12.1	A theorem of Steinberg	189
12.2	Diagonal, field and graph automorphisms	199
12.3	Graph automorphisms of $B_2(K)$ and $F_4(K)$	202
12.4	A graph automorphism of $G_2(K)$	206
12.5	Automorphisms of finite Chevalley groups	210
13	<i>The Twisted Simple Groups</i>	216
13.1	The reflection subgroup W^1	216
13.2	The system Φ^1 in \mathfrak{P}^1	219
13.3	The structure of W^1	221
13.4	Definition of the twisted groups	225
13.5	Existence of a (B, N) -pair in the twisted groups	227
13.6	The subgroup U^1	231
13.7	The subgroup H^1	237
14	<i>Further Properties of the Twisted Groups</i>	250
14.1	The finite twisted groups	250
14.2	Factorization of the polynomial $P_{W^1}(t)$	254
14.3	The orders of the finite twisted groups	259
14.4	The simplicity of the twisted groups	262
14.5	Identification with some classical groups	268
15	<i>Associated Geometrical Structures</i>	274
15.1	Chamber complexes	274
15.2	Foldings	277
15.3	Abstract Coxeter complexes	281
15.4	The complex $\Sigma(W, \Pi)$	288
15.5	Buildings	292
15.6	Retractions onto an apartment	295
15.7	Groups of type-preserving automorphisms	299

16	<i>Sporadic Simple Groups</i>	303
16.1	The Mathieu groups	303
16.2	Sporadic simple groups characterized by the centralizer of an involution	305
16.3	Towers of permutation groups	306
16.4	The Leech lattice	307
16.5	Groups generated by a class of 3-transpositions	309
	Bibliography	311
	Index of Notation	323
	Index	329
