INTRODUCTION	
Chapter I: BASICS ON TORUS EMBEDDING; EXAMPLES OF THE THEORY, by D. Mumford	
§1. Torus embeddings over the complex numbers	1
§2. The functor of a torus embedding	10
§3. Toroidal embeddings over the complex numbers	14
§4. Example: compactification of the universal elliptic curve	23
§5. Example: Hirzebruch's theory of the Hilbert modular groups	39
Chapter II: POLYHEDRAL REDUCTION THEORY IN SELF-ADJOINT CONES	54
§1. Homogeneous self-adjoint cones (by M.R.)	57
§2. Jordan Algebras (by A.A.)	64
§3. Boundary components and Peirce decompositions (by A.A.)	79
§4. Siegel sets in self-adjoint cones (by A.A.)	107
§5. Cores and co-cores (by A.A.)	119
§6. Reduction theory of positive definite forms in 2, 3, and 4 variables (by D.M.)	145
Chapter III: CONSTRUCTION OF COMPACTIFICATION OF LOCALLY SYMMETRIC VARIETIES, by M. Rapoport and D. Mumford	152
§1. Tube domains and compactification of their cusps	154
§2. The structure of bounded symmetric domains in general	166
§3. Boundary components	195
§4. Siegel domains of third kind	224
§5. Statement of the Main Theorem	249
§6. Proof of the Main Theorem	258
§7. An extension theorem and an intrinsic form of the Main Theorem	277

Chapter IV: FURTHER DEVELOPMENTS, by Y.-S. Tai

§1. Extension of differential forms to the cusps	292
§2. Projectivity of $\overline{D/T}$	310
