CONTENTS

1. G-Objects

1.1. Definition and examples..... 1

1.2. Equivariant morphisms..... 7

1.3. Orbits..... 13

*1.4. Particular G-sets..... 23

2. G-Spaces

2.1. Definition and examples..... 28

2.2. Orbitspace..... 30

3. G-Manifolds

3.1. Definition and examples of Lie groups..... 34

3.2. Definition and examples of G-manifolds.... 37

4. Vectorfields

4.1. Real functions..... 40

4.2. Operators and vectorfields..... 42

4.3. The Lie algebra of a Lie group..... 46

4.4. Effect of maps on operators and vectorfields..... 50

4.5. The functor L..... 52

4.6. Applications of the functoriality of L... 59

4.7. The adjoint representation of a Lie group..... 64

5. Vectorfields and 1-parameter groups of transformations.

5.1. 1-parameter groups of transformations..... 66

5.2. 1-parameter groups of transformations and equivariant maps..... 70

5.3. The bracket of two vectorfields..... 74

5.4. 1-parameter subgroups of a Lie group..... 77

5.5. Killing vectorfields..... 84

*5.6. The homomorphism σ: RG —> DX for a G-manifold... 89

*5.7. Killing vectorfields and equivariant maps..... 96

6. The exponential map of a Lie group.

6.1. Definition and naturality of exp..... 103

6.2. exp is a local diffeomorphism at the identity.... 108

6.3. Unicity of Lie group structure..... 112

*6.4. Application to fixed points on G-manifolds..... 116

6.5. Taylor's formula..... 120

7. Subgroups and subalgebras.

7.1. Lie subgroups..... 128

7.2. Existence of local homomorphisms..... 132

7.3. Discrete subgroups..... 138

7.4. Open subgroups; connectedness..... 142

7.5. Closed subgroups..... 144

7.6. Closed subgroups of the full linear group..... 150

7.7. Coset spaces and factor groups..... 154

8. Groups of automorphisms.

8.1. The automorphism group of an algebra..... 160

8.2. The adjoint representation of a Lie algebra..... 162

8.3. The automorphism group of a Lie group..... 167

Appendix: Categories and functors..... 170

Bibliography..... 175
