

1. Lie Algebras: Definitions and Examples	
2. Filtered Groups and Lie Algebras	
1. Formulae on commutators	2.1
2. Filtrations on a group	2.2
3. Integral filtrations on a group	2.5
4. Filtrations in $GL(n)$	2.6
Exercises	2.7
3. Universal Algebra of a Lie Algebra	
1. Definition	3.1
2. Functorial properties	3.2
3. Symmetric algebra of a module	3.3
4. Filtration of $U\mathfrak{g}$ and the Poincaré-Birkhoff-Witt Thm.	3.4
5. Diagonal map	3.9
Exercises	3.11
4. Free Lie Algebras	
1. Free magmas	4.1
2. Free algebra on $X$	4.2
3. Free algebra on $X$	4.2
4. Relation with the free associative algebra on $X$	4.4
5. P. Hall families	4.7
6. Free groups	4.10
7. The Campbell-Hausdorff Formula	4.13
8. Explicit formula	4.15
Exercises	4.18

5. Nilpotent and Solvable Lie Algebras	
1. Complements on $\mathfrak{g}$ -modules	5. 1
2. Nilpotent Lie algebras	5. 3
3. Main Theorems	5. 4
3*. The group theoretic analog of Engel's theorem	5. 6
4. Solvable Lie algebras	5. 8
5. Main Theorem	5. 9
5*. The group theoretic analog of Lie's theorem	5. 11
6. Lemmas on endomorphisms	5. 14
7. Cartan's criterion	5. 19
Exercises	5. 20
6. Semi-simple Lie Algebras	
1. The radical	6. 1
2. Semi-simple Lie algebras	6. 1
3. Complete reducibility	6. 3
4. The Theorem of Levi	6. 8
5. Complete reducibility continued	6. 10
6. Connection with compact Lie groups over $\underline{\mathbb{R}}$ and $\underline{\mathbb{C}}$	6. 15
Exercises	6. 18
7. Representations of $\mathfrak{sl}_n$	
1. Notations	7. 1
2. Weights and primitive elements	7. 3
3. Irreducible $\mathfrak{g}$ -modules	7. 4
4. Determination of the highest weights	7. 6
Exercises	7. 9
