## **Contents**

Preface					. \	Ш
List of Symbols and Notations					. X	ΙV
Chapter I Preliminaries						1
1. Selection of Basic Concepts from Algebra						1
A. Matrices and Determinants						1
B. Vectors in Three-dimensional Euclidean Space						7
C. Vector Spaces						15
D. Mappings of Sets and Vector Spaces						21
2. Basic Concepts from Group Theory						28
3. Basic Topological Concepts						35
4. Differential Geometry of Curves and Ruled Surfaces in $E_3$						49
5. Differentiable Manifolds, Lie Groups						69
Chapter II Motion on the Unit Sphere						94
1. Definition of Spherical Motion						94
2. Various Ways of Representing Motion, Euler Angles						07
A. Relations between the Groups $O(3)$ , ad $J$ , $SU(2)$						07
B. Introducing Euler Angles						09
3. Directing Cones, Centrodes, and Invariants of Spherical Motion						19
4. Invariants of the Trajectory of a Point, Special Motions					. 1	63
5. Kinematics of Spherical Motion						89
Chapter III Kinematics of Space Motion					. 1	197
1. Lie Group of Congruences of $E_3$ and its Lie Algebra			-		. 1	197
2. Klein Quadrics					. 2	206
3. Representation of Space Motion, Associated Spherical Motion	n				. 2	212
4. Directing Cones of Space Motion, Axoids, Elementary Motio	ns				. 2	223
5. Invariants of Motion					. 2	239
6. Invariants of Axoids and Relations between the Invariants of						
Invariants of Axolds					. 2	262
7. Trajectory of a Point						270
" riajectory of a rount		-				

8.	Special Motions							294
	Dual Vectors and Trajectories of Lines							
	Fields of Velocities and Acceleration							
	Kinematic Generation of Average Envelopes.							
	Application of Average Envelopes							
	Conjugate Surfaces of the Tool and Workpiece							
	Average Envelopes in Gearing Theory							
Rej	ferences							410
Sub	bject Index							419
