

CONTENTS

1	INTRODUCTION	1
---	--------------	---

PART I

2	FINITE DIMENSIONAL LIE GROUPS	11
2.1	The Lie algebra	11
2.2	Complex groups	12
2.3	Compact Lie groups	13
2.4	The root system	15
2.5	Simply laced groups	17
2.6	The Weyl group and the Weyl chambers: positive roots	18
2.7	Irreducible representations and antidominant weights	18
2.8	Complex homogeneous spaces	19
2.9	The Borel–Weil theorem	21
3	GROUPS OF SMOOTH MAPS	24
3.1	Infinite dimensional manifolds	24
3.2	Groups of maps as infinite dimensional Lie groups	26
3.3	Diffeomorphism groups	28
3.4	Some group-theoretic properties of $\text{Map}(X; G)$	30
3.5	Subgroups of LG : polynomial loops	32
3.6	Maximal abelian subgroups of LG	34
3.7	Twisted loop groups	36
4	CENTRAL EXTENSIONS	38
4.1	Introduction	38
4.2	The Lie algebra extensions	39
4.3	The coadjoint action of LG on $\tilde{L}\mathfrak{g}$, and its orbits	43
4.4	The group extensions when G is simply connected	46
4.5	Circle bundles, connections, and curvature	50
4.6	The group extensions when G is semisimple but not simply connected	55
4.7	The basic central extension of LU_n	57
4.8	The restriction of the extension to LT	60
4.9	The inner product on $\mathbb{R} \oplus \tilde{L}\mathfrak{g}$	64
4.10	Extensions of $\text{Map}(X; G)$; the Mickelsson–Faddeev extension	65
4.11	Appendix: The cohomology of LG and its Lie algebra	67

5	THE ROOT SYSTEM: KAC-MOODY ALGEBRAS	70
5.1	The root system and the affine Weyl group	70
5.2	Generators and relations	74
5.3	Kac-Moody Lie algebras	76
6	LOOP GROUPS AS GROUPS OF OPERATORS IN HILBERT SPACE	79
6.1	Loops as multiplication operators	79
6.2	The restricted general linear group of Hilbert space	80
6.3	The map $LGL_n(\mathbb{C}) \rightarrow GL_{\text{res}}(H^{(n)})$	82
6.4	Bott periodicity	85
6.5	The isomorphism $H^{(n)} \cong H$ and the embedding $L\mathbb{T} \rightarrow LU_n$	85
6.6	The central extension of $GL_{\text{res}}(H)$	86
6.7	The central extension of $LGL_n(\mathbb{C})$	89
6.8	Embedding $\text{Diff}^+(S^1)$ in $U_{\text{res}}(H)$	91
6.9	Other polarizations of H : replacing the circle by the line, and the introduction of 'mass'	93
6.10	Generalizations to other groups of maps	98
7	THE GRASSMANNIAN OF HILBERT SPACE AND THE DETERMINANT LINE BUNDLE	101
7.1	The definition of $\text{Gr}(H)$	101
7.2	Some dense submanifolds of $\text{Gr}(H)$	104
7.3	The stratification of $\text{Gr}(H)$	106
7.4	The cell decomposition of $\text{Gr}_0(H)$	108
7.5	The Plücker embedding	109
7.6	The $\mathbb{C}_{\leq 1}^{\times}$ -action	111
7.7	The determinant bundle	113
7.8	$\text{Gr}(H)$ as a Kähler manifold and a symplectic manifold	117
8	THE FUNDAMENTAL HOMOGENEOUS SPACE	120
8.1	Introduction: the factorization theorems	120
8.2	Two applications of the Birkhoff factorization Singularities of ordinary differential equations Holomorphic vector bundles on the Riemann sphere	123
8.3	The Grassmannian model of ΩU_n	125
8.4	The stratification of $\text{Gr}^{(n)}$: the Birkhoff and Bruhat decompositions	129
8.5	The Grassmannian model for the other classical groups	136
8.6	The Grassmannian model for a general compact Lie group	138

8.7	The homogeneous space LG/T and the periodic flag manifold	143
8.8	Bott periodicity	146
8.9	ΩG as a Kähler manifold: the energy flow	147
8.10	ΩG and holomorphic bundles	152
8.11	The homogeneous space associated to a Riemann surface: the moduli spaces of vector bundles	154
8.12	Appendix: Scattering theory	160
PART II		
9	REPRESENTATION THEORY	165
9.1	General remarks about representations	167
9.2	The positive energy condition	171
9.3	The classification and main properties of representations of positive energy	176
9.4	The Casimir operator and the infinitesimal action of the diffeomorphism group	182
9.5	Heisenberg groups and their standard representations	188
10	THE FUNDAMENTAL REPRESENTATION	195
10.1	Γ as an exterior algebra: the fermionic Fock space	196
10.2	The Hilbert space structure	200
10.3	The ring of symmetric polynomials	202
10.4	Γ as a sum of polynomial algebras	205
10.5	Jacobi's triple product identity	208
10.6	The basic representations of LU_n and LSU_n	211
10.7	Quantum field theory in two dimensions	214
11	THE BOREL-WEIL THEORY	216
11.1	The space of holomorphic sections of a homogeneous line bundle	216
11.2	The decomposition of representations: complete reducibility	221
11.3	The existence of holomorphic sections	224
11.4	The smoothness condition	227
12	THE SPIN REPRESENTATION	230
12.1	The Clifford algebra	230
12.2	Second construction of the spin representation	233
12.3	The spin representation as the sections of a holomorphic line bundle	242
12.4	The infinite dimensional spin representation	244
12.5	The basic representation of LO_{2n}	246
12.6	An analogy: the 'extra-special 2-group'	247

13	'BLIPS' OR 'VERTEX OPERATORS'	249
13.1	The fermionic operators on \mathcal{H}	250
13.2	The action of $U_{\text{res}}(H)$ and $O_{\text{res}}(H)$ on \mathcal{H}	260
13.3	The representations of level 1 of LG when G is simply laced	263
13.4	The action of $\text{Diff}^+(S^1)$ on positive energy representations of loop groups	268
13.5	General remarks: the case of a general maximal abelian subgroup of LG	271
14	THE KAC CHARACTER FORMULA AND THE BERNSTEIN–GELFAND–GELFAND RESOLUTION	273
14.1	General remarks about characters	273
14.2	Motivation of the character formula: Weyl's formula for compact groups	276
14.3	The character formula	279
14.4	The algebraic proof of the character formula	286
14.5	The Bernstein–Gelfand–Gelfand resolution	290
14.6	Applications of the resolution: the cohomology of Lg	299
