

CONTENTS

Preface	ix
Chapter I. Lie Groups and Lie Algebras	
1. $SO(3)$ and its Lie algebra	3
2. Exponential of a matrix	7
3. Closed linear groups	10
4. Manifolds and Lie groups	15
5. Closed linear groups as Lie groups	18
6. Homomorphisms	25
7. An interesting homomorphism	31
8. Representations	36
Chapter II. Representations and Tensors	
1. Abstract Lie algebras	45
2. Tensor product of two representations	48
3. Representations on the tensor algebra	56
4. Representations on exterior and symmetric algebras	64
5. Extension of scalars - complexification	73
6. Universal enveloping algebra	75
7. Symmetrization	86
8. Tensor products over an algebra	92
Chapter III. Representations of Compact Groups	
1. Abstract theory	99
2. Irreducible representations of $SU(2)$	111
3. Root space decomposition for $U(n)$	114
4. Roots and weights for $U(n)$	118
5. Theorem of the Highest Weight for $U(n)$	124
6. Weyl group for $U(n)$	129
7. Analytic form of Borel-Weil Theorem for $U(n)$	138
Chapter IV. Cohomology of Lie Algebras	
1. Motivation from differential forms	153
2. Motivation from extensions	161
3. Definition and examples	166
4. Computation from any free resolution	175
5. Lemmas for Koszul resolution	188
6. Exactness of Koszul resolution	190

Chapter V. Homological Algebra

1. Projectives and injectives	199
2. Functors	210
3. Derived functors	230
4. Connecting homomorphisms and long exact sequences	238
5. Long exact sequence for derived functors	245
6. Naturality of long exact sequence	258

Chapter VI. Application to Lie Algebras

1. Projectives and injectives	266
2. Lie algebra homology and cohomology	282
3. Poincaré duality	288
4. Kostant's Theorem for $U(n)$	292
5. Harish-Chandra isomorphism for $U(n)$	301
6. Casselman-Osborne Theorem	317

Chapter VII. Relative Lie Algebra Cohomology

1. Motivation for how to construct representations	325
2. (\mathfrak{g}, K) modules	334
3. The algebra $R(\mathfrak{g}, K)$	340
4. The category $\mathcal{C}(\mathfrak{g}, K)$	360
5. The functors P and I	365
6. Projectives and injectives	373
7. Homology, cohomology, and Ext	384
8. Standard resolutions	386
9. Poincaré duality	396
10. Revised setting for Kostant's Theorem	402
11. Borel-Weil-Bott Theorem for $U(n)$	408

Chapter VIII. Representations of Noncompact Groups

1. Structure theory for $U(m, n)$	417
2. Cohomological induction	428
3. Vanishing above the middle dimension	437
4. First reduction below the middle dimension	448
5. Second reduction below the middle dimension	460
6. Vanishing below the middle dimension	468
7. Effect on infinitesimal character	473
8. Effect on multiplicities of K types	479

Notes 490
