CONTENTS

Chapter I

INTRODUCTION AND GENERALITIES

1.0 Preliminary remarks; the organization of this memoir.....1

1.1 Notations, conventions, and some facts needed later.....3

1.2 Spherical functions on G with respect to K.....5

1.3 Spherical functions of class u and the induced representation $R_u = \operatorname{ind}_{K\uparrow G} u$ 7

1.4 The Plancherel's and inversion formulas for a type I group..12

1.5 The Plancherel's formula for S_u^2 for all u implies the Plancherel's formula for $L^2(G)$.....15

1.6 The characters of G as locally constant class functions...19

1.7 Exhaustion of algebraically irreducible representations of G and spherical functions.....21

Chapter II

THE IRREDUCIBLE UNITARY REPRESENTATIONS OF PGL(2,Ω) AND THEIR CHARACTERS

2.1 The principal series of irreducible unitary representations of PGL(2,Ω).....34

2.2 The supplementary series of irreducible unitary representations of G.....39

2.3 The one-dimensional representations of G.....40

2.4 The special representations of G.....40

2.5 The discrete series of G.....41

2.6 The characters of the unitary representations of G.....45

Chapter III

A DESCRIPTION OF ALL IRREDUCIBLE REPRESENTATIONS OF K = PGL(2,$\underline{o}$)

3.1 Representation theory of the integer triangle subgroup $T \cap K$ of K.....51

3.2 A description of the irreducible representations of K contained in $\operatorname{ind}_{B \cap K \uparrow K} 1$.....55

3.2.1 Two miscellaneous results.....58

3.2.2 Some estimates on the dimensions of the spaces $S_u(\nu)$.....63

3.3 The decomposition of the restrictions to K of the irreducible representations of the discrete series of G.....68

3.3.1 Classification of all the irreducible representations contained in the restrictions to K of the discrete series of G; proofs of irreducibility, equivalence, and continuity for the representations T^{π} of the discrete series of G.....79

3.4 A catalogue of irreducible representations of K.....94

3.5 The characters of the irreducible representations of K.....98

Chapter IV

COMPUTATION OF THE CHARACTERS OF G AND OF K

4.1 The computation of characters for the principal series of G and for the irreducible representations of K contained in $\operatorname{ind}_{B \cap K \uparrow K} 1$, also for the supplementary series and the special representations.....106

4.2 Computation of the characters of the irreducible representations T^{π} of the discrete series of G and of the irreducible representations of K contained in res T^{π} 113
$G \downarrow K$

4.2.1 An integral formula 114

4.2.2 Evaluation of the integral 121

Chapter V

THE FOURIER TRANSFORMATION AND INVERSION FORMULAS FOR S_u^0 FOR ALL u

5.1 What is to be done 138

5.2 The Fourier transform and inversion formulas for S_u^0 in the case u is one-dimensional 141

5.3 The Fourier transform and inversion formulas for S_{u_1} and $S_{u_{sgn}}$ 145

5.4 The Fourier transformation and inversion formulas for S_u^0, $u = u_\alpha$, a representation of the principal series of K 152

5.5 The Fourier transform and inversion formulas for S_u^0, $u \in \text{ind}_{B \cap K \uparrow K} 1$ and $u \notin \text{ind}_{T \cap K \uparrow K} 1$ 158

5.6 The Fourier transform and inversion formulas for S_u, u any irreducible representation of K which is not contained in $\text{ind}_{B \cap K \uparrow K} 1$ 169

5.7 The Fourier transform and inversion formulas for S_u^0 for $u \in \text{ind}_{T \cap K \uparrow K} 1$ 176

5.7.1 The matrix coefficients for $M(y^n,\alpha)$ in the space H_i^α for the case $\underset{T\downarrow T\cap K}{\text{res}}\,\alpha$ = "1" or sgn.....177

5.7.2 The matrix coefficients for $M(y^n,\alpha)$ in the space H_i^α for the case $\underset{T\downarrow T\cap K}{\text{res}}\,\alpha = \alpha_1$ with α_1 primitive mod $\underline{P}^m$, $0<m\leq i/2$.....179

5.7.3 The matrix coefficients for T^π in the space $\underline{P}_i^\pi$ for the case in which π is primitive mod $\underline{p}^{m*}$ and $i\geq 2m-\delta(\lambda)$.....180

5.7.4 The inversion formula for S_u^0 and for $C_\infty^0(G)$.....181

BIBLIOGRAPHY.....200
