Editor's Preface	V
Preface	XIII

Part I

CHAPTER 1. <i>Groups and Homogeneous Spaces</i>	1
1.1. Groups	1
1.2. Differentiable Manifolds	15
1.3. Lie Groups and Lie Algebras	41
1.4. Transformation Groups. Invariant Tensor Fields	53
1.5. Additional Structures on Manifolds	62
1.6. The Hurwitz Measure	69
1.7. Quasi-Invariant Measures	85
1.8. Elements of the Classification of Lie Groups and Algebras	89
CHAPTER 2. <i>Representations of Locally Compact Groups</i>	96
2.1. Definition of a Representation. Examples	97
2.2. Basic Constructions. Induced Representations	103
2.3. Further Constructions of Representations	111
2.4. Intertwining Operators. Unitary Equivalence of Representations	115
2.5. Positive Definite Measures and Cyclic Representations	118
2.6. Matrix Elements of Representations	124
2.7. Group Algebra Representations and Group Representations	128
2.8. The Universal Enveloping Algebra of a Lie Group Algebra. The Differential of a Representation	130
CHAPTER 3. <i>Decomposition Theory of Unitary Representations</i>	141
3.1. Irreducible Representations. Schur's Lemma	142
3.2. Classical Fourier Transformation	152
3.3. The Fourier Transforms of Functions in $\mathcal{D}(\mathbb{R}^n)$	156
3.4. Analysis on the Multiplicative Group \mathbb{R}_+ . The Mellin Transformation	158

3.5. The Circle Group and the Fourier Series	159
3.6. Fourier Analysis on a Commutative Locally Compact Group	164
CHAPTER 4. <i>Representations of Compact Groups</i>	173
4.1. Operators of the Hilbert–Schmidt Type	175
4.2. The Tensor Product of Hilbert Spaces	178
4.3. The Frobenius Theorem	181
4.4. The Peter–Weyl Theory	185
4.5. The Orthogonality Relations of Matrix Elements	188
4.6. Characters of Finite-Dimensional Representations	192
4.7. Harmonic Analysis on Compact Groups and on Their Homogeneous Spaces	194
CHAPTER 5. <i>Theory of Spherical Functions</i>	207
5.1. The Spherical Integral Equation	208
5.2. Spherical Functions and Spherical Representations	218
5.3. Existence of Spherical Functions. Gelfand Pairs	220
5.4. Differentiability of Spherical Functions on Lie Groups	226
Part II	
CHAPTER 6. <i>The Euler Γ- and B-Functions</i>	243
6.1. Definition of the Γ -Function	243
6.2. The Fourier Transformation and the Mellin Transformation	246
6.3. The Reflection Formula for the Γ -Function	247
6.4. The Riemann ζ -Function	253
CHAPTER 7. <i>Bessel Functions</i>	258
7.1. The Group of Rigid Motions of \mathbf{R}^2	258
7.2. Spherical Representations of the Group $M(2)$	259
7.3. Properties of the Bessel Functions	264
7.4. Harmonic Analysis on the Symmetric Space of the Motion Group $M(2)$. The Fourier–Bessel Transformation	269
CHAPTER 8. <i>Theory of Jacobi and Legendre Polynomials</i>	279
8.1. Representations of the Group $SL(2, \mathbf{C})$ on a Space of Polynomials	279

8.2. Properties of the Representations T^l and Their Consequences	284
8.3. Integral Equations for the Functions P_{jk}^l	287
8.4. The Differential of the Representation T^l . Recurrence and Differential Equations for the Functions P_{mn}^l	294
8.5. Characters of Irreducible Representations and New Integral Formulas for Legendre Functions	298
8.6. Harmonic Analysis on the Group $SU(2)$ and the Sphere S^2	300
8.7. Decomposition of the Tensor Product of Representations T^l . The Clebsch–Gordan Coefficients	304
CHAPTER 9. Gegenbauer Polynomials	322
9.1. Information about the Group $SO(n)$ and the Homogeneous Space S^{n-1}	322
9.2. Spherical Representations of the Group $SO(n)$	323
9.3. Gegenbauer's Equation and Basic Recurrences	330
9.4. Integral Formulas for the Gegenbauer Polynomials	332
9.5. A Mean Value Theorem for a Spherical Function	336
CHAPTER 10. Jacobi and Legendre Functions	344
10.1. Structure of the Group $SL(2, \mathbf{R})$ and Its Homogeneous Spaces	344
10.2. Induced Representations of the Group $SL(2, \mathbf{R})$	352
10.3. Properties of the Representation \mathcal{U}^σ and the Function \mathfrak{P}_{mn}^l	358
10.4. Differentials of the Representations \mathcal{U}^σ . Recurrence Relations. Irreducibility	363
10.5. Harmonic Analysis on the Disc $SU(1, 1)/\mathcal{K}$	367
CHAPTER 11. Harmonic Analysis on the Lobatschevsky space	389
11.1. The Group $SL(2, \mathbf{C})$. Induced Spherical Representations	389
11.2. On the Structure of the Lobatschevsky Space	393
11.3. The Spherical Fourier Transformation on \mathcal{H}	400
11.4. Decomposition into Plane Waves on \mathcal{H}	402
11.5. Differential Properties of Spherical Functions	411

11.6. The Gelfand–Graev Transformation	413
11.7. Irreducibility Problems of the Representations \mathscr{W}^l	418
CHAPTER 12. <i>The Laguerre Polynomials</i>	424
12.1. The Group, the Representation, Matrix Elements	424
12.2. Basic Properties of the Laguerre Polynomials	429
12.3. Differential Properties of the Laguerre Polynomials	430
12.4. One-Dimensional Harmonic Oscillator and the Hermite Polynomials	434
12.5. Connection between the Laguerre Polynomials and the Jacobi Functions	437
12.6. Orthogonality Relations for the Laguerre Polynomials	439
CHAPTER 13. <i>The Hypergeometric Equation</i>	445
13.1. The Second Order Homogeneous Linear Differential Equation on \mathcal{C}	445
13.2. Solutions of the Hypergeometric Equation in the Form of Euler Integrals	458
13.3. The Hypergeometric Function for Some Special Values of the Parameters	463
13.4. The Confluent Hypergeometric Equation and the Confluent Hypergeometric Function	465
Part III	
Introduction	474
CHAPTER 14. <i>Affine Transformations</i>	478
14.1. Associated Vector Bundles	478
14.2. Operations on Differential Forms	480
14.3. Affine Connections	483
14.4. Parallel Translation. Geodesics. The Exponential Mapping	491
14.5. Covariant Differentiation	495
14.6. Affine Mappings	499
14.7. The Riemannian Connection. Sectional Curvature	504
CHAPTER 15. <i>Symmetric Spaces</i>	517
15.1. Definitions and Examples	517
15.2. Affine Connection on a Symmetric Space	520

15.3. Structure of the Group of Displacements of a Symetric Space	527
15.4. Geometry of Symmetric Spaces	532
15.5. Riemannian Symmetric Spaces. Riemann Pairs	537
15.6. A Symmetric Pair is a Gelfand Pair	544
CHAPTER 16. <i>General Harmonic Analysis on a Symmetric Space</i>	550
CHAPTER 17. <i>Semisimple Algebras. Semisimple Groups. Symmetric Spaces of the Non-Compact Type</i>	560
17.1. Compact Lie Algebras	560
17.2. Structure of Semisimple Algebras	564
17.3. Iwasawa Decomposition of an Algebra and of a Group	576
17.4. The Weyl Group	581
17.5. Boundary of a Symmetric Space of the Non-Compact Type	586
17.6. Planes and Horocycles in a Symmetric Space	590
CHAPTER 18. <i>Harmonic Analysis on Symmetric Spaces of the Non-Compact Type</i>	605
18.1. Plane Waves and Spherical Functions	605
18.2. The Fourier Transformation on a Symmetric Space	615
18.3. Properties of Spherical Functions	618
18.4. Asymptotic Behaviour of a Spherical Function. The Harish-Chandra $c(\cdot)$ -Function	623
18.5. Properties of the Harish-Chandra $c(\cdot)$ -Function	626
18.6. The Plancherel Formula for the Fourier Transformation on a Symmetric Space	631
18.7. The Radon Transformation	633
18.8. The Paley-Wiener Theorem	642
Table of Formulas	646
References	672
List of Symbols	680
Author Index	682
Subject Index	683
