Foreword v

Preface vii

Glossary xix

Introduction 1

Chapter 1 Elements of Group Theory

1.1. Definition of group 4
1.2. Permutation group S_n 7
1.2.1. Definition of S_n 7
1.2.2. Permutation expressed in terms of cycles and transpositions 8
1.3. Subgroup 10
1.4. Isomorphism and homomorphism 10
1.5. Conjugate classes 12
1.6. Cosets, Lagrange theorem 15
1.7. Invariant subgroup 16
1.8. Factor group* 16
1.9. Direct product and semi-direct product 17

Chapter 2 Group Representation Theory

2.1. Linear vector space 19
2.1.1. Definition of linear vector space 19
2.1.2. Covariant and contravariant 20
2.1.3. Metric tensor 20
2.2. Linear operator and its representation 22
2.3. Complete set of commuting operators 24
2.3.1. Eigenspace of self-adjoint operators 24
2.3.2. Complete set of commuting operators (CSCO) 25
2.4. Group representations 26
2.5. Unitary representation 28
2.6. Regular Rep and group algebra 30
2.6.1. Definition of regular representation 30

2.6.2. Group space . . . 31
2.6.3. Group algebra . . . 32
2.7. Space of functions on the group . . . 33
2.8. Equivalent representations and characters . . . 34
2.9. Reducible and irreducible representations . . . 35
2.10. Subduced and induced representations . . . 38
2.11. Schur's lemma . . . 39
2.12. Appendix: Non-orthonormal basis . . . 40
2.12.1. Two definitions of the representation of an operator . . . 40
2.12.2. Representation of an adjoint operator . . . 41
2.12.3. Representation of a unitary operator . . . 42
2.12.4. Representation transformation . . . 42
2.12.5. Eigenvectors of a self-adjoint operator . . . 43

Chapter 3 Representation Theory for Finite Groups

3.1. Class space and class operators . . . 46
3.1.1. Class operators . . . 46
3.1.2. Class algebra . . . 48
3.1.3. Space of functions on classes . . . 48
3.1.4. The natural representation of a class algebra . . . 49
3.2. The first kind of CSCO of G (CSCO-I) . . . 51
3.2.1. Reduction of the natural representation of the class algebra . . . 51
3.2.2. The CSCO-I of G . . . 53
3.2.3. The CSCO of a direct product group $G_1 \times G_2$ . . . 55
3.2.4. The case of non-self-adjoint class operators . . . 55
3.2.5. The groups S_3 and $\mathcal{C}_{6v}$ . . . 56
3.3. Projection operator $P^{(\nu)}$ . . . 58
3.3.1. Decomposition of the regular rep into inequivalent reps of G . . . 58
3.3.2. Label for irreps . . . 60
3.3.3. Decomposition of an arbitrary rep space . . . 61
3.4. Reduction of representations of $\mathcal{C}_{3v}$, S_2 and S_3 . . . 63
3.4.1. The group $\mathcal{C}_{3v}$ . . . 63
3.4.2. The group S_2 . . . 64
3.4.3. The group S_3 in the configuration $\alpha^2\beta$ . . . 64
3.4.4. The group S_3 in the configuration $\alpha\beta\gamma$ . . . 67
3.5. State permutation group . . . 69
3.6. Reduction of the regular rep of S_3 . . . 70
3.7. Intrinsic group . . . 73
3.7.1. Definition of the intrinsic group . . . 73
3.7.2. Regular representation of intrinsic group . . . 74
3.7.3. Action of intrinsic group elements on functions on the group . . . 75
3.7.4. Properties of the intrinsic group . . . 75
3.7.5. Some remarks . . . 76
3.7.6. Intrinsic state (regular rep case) . . . 77
3.7.7. Intrinsic permutation group and state permutation group . . . 78

3.8. CSCO-II and CSCO-III of G . . . 78
3.9. Full reduction of the regular representation . . . 81
3.9.1. Eigenvectors of the CSCO-III of G . . . 81
3.9.2. The representations $D^{(\nu)k}(G)$ and $D^{(\nu)m}(\overline{G})$ . . . 83
3.9.3. The standard phase choice for $P_m^{(\nu)k}$ . . . 84
3.9.4. The irreducibility of $D^{(\nu)}(G)$ . . . 86
3.9.5. The EFM for $G \supset G(s)$ irreducible matrices . . . 87
3.9.6. Generalized irreducible matrices . . . 88
3.9.7. Reduction of the regular representation in configuration space . . . 88
3.9.8. Example: the group S_3 . . . 89
3.10. Generalized projection operator . . . 90
3.10.1. Properties of $P_{mk}^{(\nu)}$ . . . 90
3.10.2. A recursive method for $P_{mk}^{(\nu)}$ . . . 93
3.11. Eigenfunction method for characters . . . 94
3.12. The applications of simple characters . . . 95
3.13. Reduction of non-regular reps (EFM for irreducible basis) . . . 96
3.13.1. Canonical subgroup chains with $\tau_\nu = 1$ . . . 96
3.13.2. Canonical subgroup chain with $\tau_\nu > 1$ . . . 97
3.13.3. Non-canonical subgroup chain . . . 100
3.13.4. Projection operator method . . . 100
3.14. Kronecker product of representations . . . 101
3.14.1. Clebsch-Gordan series . . . 101
3.14.2. Symmetrized and antisymmetrized squares . . . 102
3.15. The CG coefficients . . . 103
3.15.1. Definition and properties of the CG coefficients . . . 103
3.15.2. The EFM for CG coefficients . . . 104
3.16. Isoscalar factors . . . 105
3.17. Irreducible tensor of a group G . . . 106
3.17.1. Definition of irreducible tensor . . . 106
3.17.2. The Wigner-Eckart theorem . . . 107
3.18. Symmetries of the CG coefficients and ISF . . . 109
3.19. Applications of group theory in quantum mechanics . . . 110
3.19.1. When G is the symmetry group of the Hamiltonian . . . 110
3.19.2. Splitting of the energy level due to a perturbation . . . 112
3.19.3. Dynamical symmetry . . . 113
3.19.4. General case . . . 114
3.19.5. Selection rule . . . 114
3.20. Summary . . . 114

Chapter 4 Representation Theory of the Permutation Group

4.1. Partition, Young diagrams and eigenvalues of CSCO-I . . . 118
4.2. Characters of permutation group . . . 119
4.2.1. Character of conjugate representations . . . 119
4.3. Branching law, Young-Yamanouchi basis and Young tableaux . . . 120
4.3.1. The Young-Yamanouchi basis . . . 120

4.4. Yamanouchi matrix elements . . . 121
4.5. The CSCO-II of permutation groups . . . 127
4.6. The EFM for Yamanouchi basis (I) . . . 132
4.7. The CSCO-III of the permutation group . . . 138
4.7.1. CSCO-III . . . 138
4.7.2. The labeling for Yamanouchi basis of S_n and $\mathcal{S}_n$ . . . 139
4.7.3. Phase convention and the principle term . . . 140
4.7.4. The matrix elements of conjugate irreps . . . 140
4.7.5. The symmetrizer and anti-symmetrizer . . . 141
4.8 Quasi-standard basis of the permutation group . . . 142
4.8.1. State permutation group (for the case with repeated state labels) . . . 142
4.8.2. The quasi-standard basis of the permutation group . . . 143
4.8.3. Projection operator and quasi-standard basis . . . 144
4.8.4. The labelling of the quasi-standard basis . . . 147
4.9 The EFM for standard basis (II) . . . 150
4.10. The inner product and the CG series of permutation groups . . . 152
4.11. Calculation of the CG coefficients of the permutation group . . . 153
4.12. Properties of the CG coefficients of permutation groups . . . 158
4.13. Tables of the CG coefficients for S_3—S_5 . . . 160
4.14. Outer-product of the permutation group and the Littlewood rule . . . 166
4.15. The calculations of the IDC of S_n . . . 169
4.16. The properties of IDC . . . 171
4.17. Tables of the IDC for S_3—S_5 . . . 174
4.18. $S_{n_1+n_2} \supset S_{n_1} \otimes S_{n_2}$ irreducible basis . . . 182
4.18.1. The $S_{n_1+n_2} \supset S_{n_1} \otimes S_{n_2}$ subduced basis . . . 182
4.18.2. Transformation between the standard and non-standard basis of S_n . . . 182
4.18.3. The calculation of the SDC . . . 183
4.18.4. Tables of the SDC for S_3—S_6 . . . 187
4.19. $S_n \supset S_{n_1} \otimes S_{n_2}$ isoscalar factor* . . . 191
4.19.1. The $S_n \supset S_{n-1}$ ISF . . . 191
4.19.2. Phase convention . . . 194
4.19.3. The properties of the $S_n \supset S_{n-1}$ ISF . . . 194
4.19.4. Special case . . . 195
4.19.5. Tables of the $S_n \supset S_{n-1}$ ISF . . . 195
4.19.6. The $S_{n_1+n_2} \supset S_{n_1} \otimes S_{n_2}$ ISF* . . . 201
4.20. Appendix: Derivation of Yamanouchi matrix elements by the EFM . . . 202

Chapter 5 Lie Groups

5.1. Tensor . . . 205
5.1.1. Vector (Tensor of rank one) . . . 205
5.1.2. Tensors with rank higher than one . . . 206
5.1.3. Metric tensor . . . 206
5.1.4. Metric space . . . 207
5.2. Definition of Lie group and some examples . . . 208
5.3. Lie algebra . . . 211

5.3.1. Generators of Lie groups 211
5.4. Finite transformations 213
5.5. Correspondence between Lie groups and Lie algebras 214
5.6. Linear transformation groups 215
5.7. Infinitesimal operators for linear transformation groups 218
5.8. Metric tensor in n-dimensional space and infinitesimal operators 220
5.8.1. Unitary groups 221
5.8.2. Infinitesimal operators of SU_n 222
5.8.3. The group $U(n,m)$ 223
5.8.4. Orthogonal group O_n 224
5.8.5. The real orthogonal group $O(n,m)$ 226
5.8.6. Sympletic group 226
5.9. Infinitesimal operators in group parameter space 229
5.10 Isomorphism and anti-isomorphism of Lie groups and Lie algebras 230
5.11 Invariant integration 232
5.12 Representation of compact Lie groups 234
5.12.1. Fundamental representation 234
5.12.2. Adjoint representation 234
5.12.3. Metric tensor in the r-dimensional vector space 236
5.13 The invariants and Casimir operators of Lie groups 236
5.14 Intrinsic Lie groups 237
5.14.1. Definition and interpretation of the intrinsic Lie group 237
5.14.2. Infinitesimal operators of intrinsic groups in group parameter space . . . 239
5.15 The CSCO approach to the rep theory of Lie group 240
5.16 Irreducible tensors of Lie groups and intrinsic Lie groups 242
5.17 The Cartan-Weyl basis 244
5.18 Theorems on roots 246
5.19 Root diagram 247
5.20 The Dynkin diagram and simple root representation 249
5.21 The Cartan matrix 250
5.22 Theorems on weights 251
5.23 The Dynkin representation 254
5.24 Algorithms for computing the roots and weights 259
5.25 The fundamental weight system 265
5.26 Fundamental weight system representation and Cartesian representation 266
5.27 Comparison of the different representations 275
5.28 The characters and CG series of Lie algebras 278
5.28.1. The characters of Lie groups 278
5.28.2. The CG series of Lie groups 279

Chapter 6 The Rotation Group

6.1. The differential operators of $J_{x,y,z}$ and $\overline{J}_{x,y,z}$ in group parameter space 281
6.2. Irreps of the SO_2 group 284
6.3. The CSCO-I and characters of SO_3 285
6.4. The CSCO-III and irreducible matrix element of SO_3 289

6.5. The CSCO-II and irreducible bases of SO_3 . . . 291
6.6. The intrinsic state of SO_3 . . . 292
6.7. The projection state of SO_3 . . . 293
6.8. Irreducible tensors of SO_3 and $\overline{SO_3}$ . . . 295
6.8.1. The irreducible tensor of the adjoint rep of SO_3 and $\overline{SO_3}$ . . . 295
6.8.2. Irreducible tensor of SO_3 and $\overline{SO_3}$ in general cases . . . 295

Chapter 7 The Unitary Groups

7.1. Unitary groups in coordinate space and state space . . . 298
7.2. Relations between the CSCO-I and generators of unitary groups and permutation groups . . . 301
7.2.1. The Gel'fand invariants . . . 301
7.2.2. The relation between the CSCO-I of permutation groups and unitary groups . . . 302
7.2.3. Relations between the generators of unitary groups and permutation groups . . . 305
7.3. The CSCO-II and CSCO-III of U_n and SU_n . . . 306
7.4. The Gel'fand basis and Gel'fand matrix elements . . . 308
7.5. The Gel'fand basis of unitary groups and quasi-standard basis of permutation groups . . . 311
7.5.1. The CSCO-II of unitary groups and CSCO of the broken chains of permutation groups . . . 311
7.5.2. The labeling and finding of the Gel'fand basis . . . 313
7.6. The contragredient representation . . . 320
7.7. The CG coefficients of SU_n group . . . 322
7.7.1. The CG coefficients of U_n and the IDC of the permutation group . . . 322
7.7.2. The procedure for evaluating the SU_n CG coefficients . . . 325
7.7.3. Phase convention . . . 327
7.8. The CG coefficients of SU_n and the $S_f \supset S_{f_1} \otimes S_{f_2}$ irreducible basis . . . 327
7.9. The $SU_{mn} \supset SU_m \times SU_n$ irreducible basis . . . 328
7.9.1. The CG coefficients of S_f and the $SU_{mn} \supset SU_m \times SU_n$ irreducible basis . . . 328
7.9.2. The irreps $([\nu_1],[\nu_2])$ of the groups SU_m and SU_n contained in the irrep $[\nu]$ of SU_{mn} . . . 332
7.9.3. Representation transformation between the $SU_{mn} \supset SU_m \times SU_n$ irreducible basis and the SU_{mn} Gel'fand basis . . . 332
7.10. The $SU_{n_1n_2n_3} \supset SU_{n_1} \times SU_{n_2} \times SU_{n_3}$ irreducible bases and the Racah coefficients of permutation groups* . . . 333
7.11. $SU_{n_1n_2n_3n_4} \supset SU_{n_1} \times SU_{n_2} \times SU_{n_3} \times SU_{n_4}$ irreducible basis and the 9ν coefficients of the permutation group* . . . 335
7.12. $SU_{m+n} \supset SU_m \otimes SU_n$ irreducible basis . . . 337
7.12.1. The IDC of permutation groups and $SU_{m+n} \supset SU_m \otimes SU_n$ irreducible bases . . . 337
7.12.2. The content of irreps $([\nu_1],[\nu_2])$ of $SU_m \otimes SU_n$ in the irrep of SU_{m+n} . . . 338

7.12.3. The representation transformation between the $SU_{m+n} \supset SU_m \otimes SU_n$ irreducible basis and the Gel'fand basis of SU_{m+n} . . . 338
7.13. The isoscalar factors and the fractional parentage coefficients . . . 340
7.13.1. Isoscalar factors . . . 340
7.13.2. The orbital fractional parentage coefficients (CFP) . . . 342
7.13.3. The spin-isospin CFP . . . 345
7.13.4. The total CFP . . . 346
7.13.5. Eigenfunction method for evaluating the CFP . . . 347
7.14. $S_f \supset S_{f_1} \otimes S_{f_2} \otimes S_{f_3}$ irreducible basis and SU_n Racah coefficients* . . . 353
7.15. $S_f \supset S_{f_1} \otimes S_{f_2} \otimes S_{f_3} \otimes S_{f_4}$ irreducible basis and the 9ν coefficients of SU_n* . . . 355
7.15.1. The 9ν coefficients of SU_n . . . 355
7.15.2. Evaluation of the Racah coefficients and 9ν coefficients of SU_n . . . 356
7.16. $SU_{mn} \supset SU_m \times SU_n$ CFP . . . 358
7.16.1. $SU_{mn} \supset SU_m \times SU_n$ CFP and $S_{f_1+f_2} \supset S_{f_1} \otimes S_{f_2}$ ISF . . . 358
7.16.2. The evaluation of the $SU_{mn} \supset SU_m \times SU_n$ many-particle CFP . . . 360
7.16.3. The symmetries of the $SU_{mn} \supset SU_m \times SU_n$ ISF . . . 362
7.16.4. More examples . . . 364
7.16.5. $SU_{4(2l+1)} \supset (SU_{2l+1} \supset SO_3) \times (SU_4 \supset SU_2 \times SU_2)$ ISF and total CFP . . . 365
7.17. The $SU_{m+n} \supset SU_m \otimes SU_n$ CFP* . . . 366
7.17.1. The $S_f \supset S_{f-1}$ outer-product ISF (The $SU_f \supset SU_{f-1} \otimes U_1$ ISF) . . . 366
7.17.2. The $S_f \supset S_{f_{12}} \otimes S_{f_{34}}$ outer-product ISF ($SU_f \supset SU_{f_{12}} \otimes SU_{34}$ ISF) . . . 369
7.17.3. The $\mathcal{SU}_{m+n} \supset \mathcal{SU}_n$ ISF and $S_f \supset S_{f_{12}} \otimes S_{f_{34}}$ outer-product ISF . . . 371
7.17.4. The evaluation of $\mathcal{SU}_{m+n} \supset \mathcal{SU}_m \otimes \mathcal{SU}_n$ ISF . . . 371
7.17.5. Symmetries of the $\mathcal{SU}_{m+n} \supset \mathcal{SU}_m \otimes \mathcal{SU}_n$ ISF . . . 372
7.18. The SU_n singlet factor . . . 373
7.19. Second quantized expression for the CFP . . . 374
7.19.1. One-particle CFP . . . 374
7.19.2. Two-particle CFP . . . 377
7.19.3. The CFP in the interacting boson model . . . 378

Chapter 8 The Point Groups

8.1. Basic operations of point groups . . . 380
8.1.1. Basic operations and their faithful reps . . . 380
8.2. Some commonly used point groups . . . 385
8.3. The CSCO-I and CSCO-II of point groups . . . 389
8.3.1. The conventional labeling for point group irreps (Mullikan notation) . . . 389
8.3.2. The CSCO-II for the commonly used point groups . . . 395
8.4. Irreducible matrix elements and irreducible basis of point groups G . . . 395
8.4.1. Irreducible matrices . . . 395
8.4.2. Irreducible basis . . . 398
8.4.3. The splitting of atomic levels and the $O_3 \supset G \supset G(s)$ basis . . . 399
8.5. The CG coefficients of point groups . . . 402
8.5.1. The CG series of point groups . . . 402
8.5.2. The CG coefficients of point groups . . . 403

8.6. Molecular orbital theory . . . 405
8.7. Single electron SALC . . . 407
8.8. Double point group . . . 416
8.9. The rep group . . . 418
8.10. Symmetry adapted basis for double point groups . . . 421

Chapter 9 Applications of Group Theory to Many-Body Systems

9.1. Pure configuration shell model . . . 423
9.1.1. One-body operator . . . 423
9.1.2. Two-body operator . . . 424
9.2. Antisymmetric wave functions for a A+B system . . . 425
9.3. Transformation between symmetry bases and physical bases in the quark model . . . 427
9.4. The CFP for a mixed configuration . . . 429
9.5. The dynamic symmetry models of nuclei . . . 430
9.6. The quasispin model . . . 431
9.7. The proton-neutron quasispin model . . . 433
9.8. The Elliott model . . . 436
9.9. The interacting boson model . . . 439
9.10. The SO_8 and SP_6 fermion dynamic symmetry model . . . 446
9.10.1. The generators of SO_8 and SP_6 . . . 446
9.10.2. The SO_8 and SP_6 Hamiltonian . . . 450
9.10.3. The FDSM wave functions . . . 452
9.11. The molecular shell model . . . 457
9.11.1. The Hamiltonian as a function of infinitesimal operators of the unitary group . . . 457
9.11.2. Spin-free approximation . . . 458

Chapter 10 The Space Groups

10.1. The Euclidean group . . . 461
10.1.1. Definition of the Euclidean group . . . 461
10.1.2. Properties of the Euclidean group operators . . . 461
10.2. The lattice group . . . 462
10.3. The space group . . . 463
10.4. The point group **P** and the crystal system . . . 464
10.5. The Bravais lattice . . . 465
10.6. Operators of the space group . . . 467
10.6.1. The properties of group operators . . . 467
10.6.2. Example: Group D_{4h}^{14} . . . 469
10.7. The reciprocal lattice vectors . . . 470
10.8. Irreps of the lattice group . . . 471
10.9. The Brillouin zone . . . 472
10.10. The electron state in a periodic potential . . . 473
10.11. Representation space of the space group . . . 474
10.12. The little group **G(k)** . . . 475

10.13. The representation groups $G\mathbf{k}$ and $G'\mathbf{k}$ . . . 476
10.13.1. The rep group $G_{\mathbf{k}}$ . . . 476
10.13.2. The rep group $G'_{\mathbf{k}}$ . . . 477
10.13.3. Special cases of the rep group $\mathbf{G}'_{\mathbf{k}}$ . . . 478
10.14. The irreducible basis and matrices of $\mathbf{G}'_{\mathbf{k}}$ . . . 479
10.14.1. The group table of $\mathbf{G}'_{\mathbf{k}}$ . . . 479
10.14.2. The CSCO-II and CSCO-III of $\mathbf{G}'_{\mathbf{k}}$ . . . 480
10.14.3. The irreps of $\mathbf{G}'_{\mathbf{k}}$ and the projective irreps of $\mathbf{G}_0(\mathbf{k})$ . . . 481
10.14.4. The irreducble basis of $\mathbf{G}(k)$ . . . 482
10.15. Examples: the point W of O_h^7 . . . 483
10.15.1. Seeking the CSCO and the characters of the point W of the space group O_h^7 . . . 483
10.15.2. Seeking the CSCO-I from the existing character table . . . 485
10.15.3. Constructing irreps of the rep group $\mathbf{G}'_{\mathbf{k}}$. The point W of O_h^7 . . . 485
10.16. Irreducible basis and representations of the space group . . . 486
10.16.1. The $\mathbf{k}$ star . . . 486
10.16.2. The induced rep . . . 488
10.16.3. A simple algorithm for full rep matrices . . . 490
10.16.4. The $\mathbf{G} \supset \mathbf{G}(\mathbf{k}_\sigma) \supset \mathbf{G}(s_\sigma) \supset \mathbf{T}$ irreducible basis . . . 492
10.17. The irreducible basis and matrices of C_{2v}^4 . . . 493
10.17.1. General star: $\mathbf{p} = (p_1, p_2, p_3)$ . . . 493
10.17.2. The star $\Gamma : \mathbf{p} = (0,0,0)$ . . . 494
10.17.3. The star $\Sigma : \mathbf{p} = (p_1, 0, 0)$ . . . 495
10.17.4. The star $X : \mathbf{p} = (1/2, 0, 0)$ . . . 495
10.18. The Clebsch-Gordan coefficients of space groups* . . . 496
10.18.1. The CG series . . . 496
10.18.2. The calculation of the CG coefficients . . . 498
10.18.3. Relative phase of the CG coefficients . . . 499
10.18.4. The full CG coefficients of space groups . . . 500
10.18.5. Summary of the eigenfunction method for space group CG coefficients . . . 500
10.19. Examples: obtaining space group Clebsch-Gordan coefficients* . . . 502
10.19.1. The CG coefficients of O_h^7 for $*X(1) \otimes *X(2) \longrightarrow *X(\nu'')$ . . . 502
10.19.2. The CG coefficients of O_h^7 for $^*X(1) \otimes *W(1) \longrightarrow *\Delta(\nu'')$ . . . 505
10.20. The double space groups . . . 508
10.21. Appendices . . . 513

Appendix

Table A1. Dimensions of irreps of the permutation group $S_f (f \leq 6)$ and the unitary groups $SU_n (n \leq 6)$ . . . 515

Table A2. Phase factors $\varepsilon_1(\nu_1\nu_2\nu)$ for the permutation group IDC and SU_n CG coefficients 515
