Introduction	1
I Localization Theory	9
I.1 Basic notions on \mathcal{D} -modules	9
I.2 \mathcal{D} -modules with a group action	10
I.3 Parabolic subgroups and flag spaces	12
I.4 Differential operators on flag spaces	14
I.5 Global sections of \mathcal{D}_λ	15
I.6 \mathcal{D} -affine varieties	19
I.7 Holonomic modules and Harish-Chandra modules	24
II Spherical \mathcal{D}-modules	29
II.1 K -orbits in a flag space.	29
II.2 (\mathcal{D}, K) -modules with a K -fixed vector	33
II.3 Relations with the analytic theory.	34
II.4 Going from (\mathcal{D}, K) modules to (\mathcal{D}, H) modules	39
II.5 H -spherical (\mathcal{D}, K) -modules.	45
II.6 \mathcal{D} -modules and hyperfunctions.	52
II.7 Closed orbits and discrete series.	57
II.8 An algebraic Poisson transform.	63

III Microlocalization and Irreducibility	68
III.1 Microlocal Differential Operators	68
III.2 Microlocalization of a non-commutative ring.	69
III.3 Microlocalization of \mathcal{D}_λ	71
III.4 Microlocalization of $U_{\mathbf{x}}$	73
III.5 Microlocal study of the moment map.	74
III.6 Associated variety of a submodule of $\Gamma\mathcal{M}$	76
III.7 Irreducibility criterion	78
III.8 Decomposable modules.	80
IV Singularities and Multiplicities	84
IV.1 Normality	84
IV.2 Unibranchness	86
IV.3 Invariant differential operators on a reductive symmetric space	89
IV.4 Multiplicity one within an eigenspace of $\mathbf{D}(G/H)$	96
IV.5 Intertwining maps between distinct eigenspaces of $\mathbf{D}(G/H)$. .	108
IV.6 Multiplicities of principal series	116
IV.7 τ -invariant of discrete series on exceptional symmetric spaces .	118
