Chapter 9:
Special Functions Connected with $SO(n)$ and with Related Groups

9.1. Groups Related to $SO(n)$ and Corresponding Homogeneous Spaces 1

9.1.1. The groups $SO(n)$, $SO_0(n-1,1)$ and corresponding spaces . . 1
9.1.2. The Lie algebra of $SO_0(n-1,1)$ 4
9.1.3. The groups $ISO(n-1)$ and $ISO_0(n-2,1)$ 6
9.1.4. The group $SO_0(p,q)$ and related homogeneous spaces 7
9.1.5. Coordinate systems on S^{n-1} and H_+^{n-1} 10
9.1.6. Coordinate systems on H_-^{n-1} and C_+^{n-1} 14
9.1.7. Spherical coordinates on $H_\pm^{pq}$ and C^{pq} 17
9.1.8. The Laplace operators 19
9.1.9. Invariant measures 22

9.2. Class 1 Representations of $SO(n)$ and of Related Groups 25

9.2.1. The representations $T^{n\sigma}$ of the group $SO_0(n-1,1)$ 25
9.2.2. Finite dimensional representations of the group $SO(n)$ 27
9.2.3. Realizations of representations of the groups $SO(n)$ and $SO_0(n-1,1)$ in spaces of harmonic and $\Box$-harmonic functions 28
9.2.4. The representations T^{nR} of the groups $ISO(n-1)$ and $ISO_0(n-2,1)$ 31
9.2.5. Infinitesimal operators of representations 32
9.2.6. Irreducibility 33
9.2.7. Intertwining operators for the representations $T^{n\sigma}$ of the group $SO_0(n-1,1)$ 36
9.2.8. Unitary representations 39
9.2.9. Representations of the group $SO_0(p,q)$ 40
9.2.10. Discrete series representations of the group $SO_0(p,q)$ on $H_\pm^{pq}$ 43

9.3. Zonal Spherical Functions of Representations of $SO(n)$ and of Related Groups 44

9.3.1. The orthonormal basis of the space $\mathfrak{L}^2(S^{n-1})$ and spherical functions of representations of $SO(n)$ 44
9.3.2. Evaluation of zonal spherical functions 46
9.3.3. Integral representations of special functions 48
9.3.4. The connections with other functions 50
9.3.5. Differential equations and integral representations 51
9.3.6. Analogs of the Rodrigues formula 55

9.3.7. Generating functions 59
9.3.8. Orthogonality relations for Gegenbauer polynomials 62
9.4. Associated Spherical Functions and Their Properties 65
9.4.1. The matrices of the representations $T^{n\ell}$, $T^{n\sigma}$ and T^{nR} 65
9.4.2. Evaluation of associated spherical functions 67
9.4.3. Addition theorems 71
9.4.4. Generalizations of the addition theorems 73
9.4.5. Product formulas 76
9.4.6. Generalized product theorems 80
9.4.7. The Banach algebras 84
9.4.8. Raising and lowering operators 86
9.4.9. Relations between spherical functions for the groups of different dimensionalities 89
9.4.10. Asymptotic properties of spherical functions of the group $SO_0(n-1,1)$ 92
9.4.11. Dougall's formula for Gegenbauer polynomials 94
9.4.12. Functional relations for Chebyshev polynomials 99
9.5. Matrix Elements of Class 1 Representations and Generalization of Gegenbauer Polynomials, Legendre and Bessel Functions . . 100
9.5.1. Matrix elements of class 1 representations 100
9.5.2. Evaluation of the functions $P^{n\ell}_{kmj}(\cos\theta)$ 103
9.5.3. Evaluation of the functions $\mathfrak{P}^{n\sigma}_{kmj}(\cosh\theta)$ and $J^n_{kmj}(x)$ 105
9.5.4. Expansion of $P^{n\ell}_{kmj}(\cos\theta)$ into Fourier series 106
9.5.5. Symmetry properties of the functions $\mathfrak{P}^{n\sigma}_{kmj}(x)$, $P^{n\ell}_{kmj}(x)$ and $J^n_{kmj}(x)$ 108
9.5.6. The functions $\mathfrak{P}^{n\sigma}_{kmm}(x)$, $P^{n\ell}_{kmm}(x)$ and $J^n_{kmm}(x)$ 109
9.5.7. The expression for $P^{n\ell}_{kmj}(0)$ in terms of Wilson polynomials . . 111
9.5.8. Boundedness properties 114
9.5.9. The orthogonality relation for $P^{n\ell}_{kmj}(x)$ 117
9.5.10. Addition theorems and product formulas 118
9.5.11. Generating functions 120
9.5.12. Characters of $T^{n\ell}$ and the functions $P^{n\ell}_{kmj}(x)$ 123
9.5.13. The functions J^n_{kmj} as the limit of $P^{n\ell}_{kmj}$ and of $\mathfrak{P}^{n\sigma}_{kmj}$ 124
9.5.14. Infinitesimal operators of the representations 124
9.6. The Groups $O(\infty)$, $IO(\infty)$, the Infinite Dimensional Laplace Operator and Hermite Polynomials 127
9.6.1. The Gauss measure. The group $O(\infty)$ 127
9.6.2. The projective limit of spheres 129
9.6.3. The infinite dimensional Laplace operator 133
9.6.4. The Hilbert space $\mathfrak{L}_c(\Phi)$ 136
9.6.5. Irreducible representations of $O(\infty)$ 138
9.6.6. Matrix elements of the representations T^n 139

9.6.7. Hermite polynomials as the limit of Gegenbauer polynomials . 141
9.6.8. Properties of Hermite polynomials 143
9.6.9. The Wiener transform 148
9.6.10. Representations of the group $IO(\infty)$ 149
9.6.11. Matrix elements of the representations T^c 151
9.6.12. Other properties of Hermite polynomials 153

Chapter 10: Representations of Groups, Related to $SO(n-1)$, in Non-Canonical Bases, Special Functions, and Integral Transforms

10.1. Decompositions of Quasi-Regular Representations and Integral Transforms 159
10.1.1. Decomposition of the quasi-regular representation of the group $ISO(n-1)$ 159
10.1.2. Decomposition of the quasi-regular representation of the group $SO_0(n-1,1)$ in $\mathfrak{L}^2(C_+^{n-1})$ 160
10.1.3. The Gel'fand-Graev transform 162
10.1.4. Decomposition of the quasi-regular representation Q_+^{n-1} of the group $SO_0(n-1,1)$ 166
10.1.5. Restrictions of the representation $T^{n\sigma}$ of $SO_0(n-1,1)$ onto subgroups 169
10.1.6. Decomposition of the quasi-regular representation of $SO_0(p,q)$ 171
10.2. The Funk-Hecke Theorem and its Analogs. Continuous Bases and Integral Transforms 173
10.2.1. The Funk-Hecke theorem 173
10.2.2. The analog of the Funk-Hecke theorem for $\Box$-harmonic functions 176
10.2.3. The analog of the Funk-Hecke theorem for the group $ISO(n-1)$ 180
10.2.4. The Bochner theorem and its corollaries 181
10.2.5. The continuous basis in the space $\mathfrak{L}^2(\mathbb{R}^{n-1})$ 184
10.2.6. The Fourier-Bessel transform 186
10.2.7. The continuous basis in the space $\mathfrak{L}^2(H_+^{n-1})$ 189
10.2.8. The generalized Fock-Mehler transform 190
10.3. The Poisson Transforms and Special Functions 193
10.3.1. The Poisson transforms 193
10.3.2. The Poisson transforms of the bases of the space $\mathfrak{B}^{n\sigma}$ and integral transforms on the hyperboloid 198
10.3.3. Expansions of Poisson kernels 201
10.3.4. Poisson transforms and addition theorems for special functions 203

10.4. Spherical Functions in Cylindrical Coordinates and Special Functions 207
10.4.1. Harmonic polynomials in bispherical coordinates 207
10.4.2. Associated K_{pq}-spherical functions on the sphere 210
10.4.3. Associated K_{pq}-spherical functions on the hyperboloid H_+^{pq} . . 212
10.4.4. Differential equations and integral representations for the functions $Y_{rs}^{pq\ell}(\theta)$ and $Y_{rs}^{pq\sigma}(\theta)$ 214
10.4.5. Addition and product theorems 217
10.4.6. The Poisson transform of the basis of $\mathfrak{B}^{n\sigma}$, corresponding to the cylindrical section of the cone 220
10.4.7. Integral transforms on H_+^{n-1} related to the subgroup $SO(p) \times SO_0(q-1,1)$ 221
10.5. The Tree Method 223
10.5.1. The tree method and polyspherical coordinates 223
10.5.2. The Laplace operator and the invariant measure on S^{n-1} . . 226
10.5.3. Trees and orthonormal bases in $\mathfrak{L}^2(S^{n-1})$ 227
10.5.4. Relations between orthogonal bases 230
10.5.5. T-coefficients for the transplantation of an edge 232
10.5.6. T-coefficients for the transplantation of an edge (degenerate cases) 236
10.5.7. The tree method and invariant harmonic polynomials 237
10.5.8. The tree method and coordinates on the hyperboloid H_+^{pq} . . 247
10.6. Transition Coefficients for Bases on the Cone and Special Functions 248
10.6.1. Maijer G-functions 248
10.6.2. Transition coefficients for the bases $\{\widehat{\Xi}_{mM}^{n\sigma,0}\}$ and $\{\widehat{\Xi}_{RM}^{n\sigma,2}\}$ 252
10.6.3. Transition coefficients for the bases $\{\widehat{\Xi}_{RM}^{n\sigma,2}\}$ and $\{\widehat{\Xi}_{\nu M\varepsilon}^{n\sigma,1}\}$ 254
10.6.4. Transition coefficients for the bases $\{\widehat{\Xi}_{mM}^{n\sigma,0}\}$ and $\{\widehat{\Xi}_{\nu M\varepsilon}^{n\sigma,1}\}$ 255
10.6.5. The coefficients $C^{n\sigma}(m,R,m_1)$ and Maijer G-functions . . . 257
10.6.6. The coefficients $D_{\pm}^{n\sigma}(\nu,R,m)$ and Maijer G-functions 262
10.6.7. The coefficients $E_{\varepsilon}^{n\sigma}(m,\nu,m_1)$ and associated Legendre functions 264
10.7. Representations of the Group $ISO_0(n-2,1)$ and Special Functions 265
10.7.1. Irreducible representations of the group $ISO_0(n-2,1)$ . . . 265
10.7.2. Representations of the group $ISO_0(n-2,1)$ by integral operators 266
10.7.3. Addition and product theorems for Macdonald functions . . . 269
10.7.4. Evaluation of the kernel $K_m(\sigma,\sigma';z)$ for the general case . . . 271

10.7.5. Class 1 representations of the group $HSO(n)$ and the function ${}_1F_1$ 272

Chapter 11: Special Functions Connected with the Groups $U(n)$, $U(n-1,1)$ and $IU(n-1)$

11.1. The groups $U(n)$, $U(n-1,1)$, $IU(n-1)$ and Related Homogeneous Spaces 278

11.1.1. The groups $U(n)$, $U(n-1,1)$ and related homogeneous spaces 278
11.1.2. The Lie algebras of the groups $U(n)$ and $U(n-1,1)$ 280
11.1.3. Subgroups of $U(n-1,1)$ 284
11.1.4. The group $IU(n-1)$ 285
11.1.5. Coordinate systems on S_C^{n-1} and H_C^{n-1} 285
11.1.6. Coordinate systems on C_C^{n-1} 288
11.1.7. Laplace operators 289
11.1.8. Invariant measures 291

11.2. Class 1 Representations of the Groups $U(n)$, $U(n-1,1)$ and $IU(n-1)$ 292

11.2.1. Harmonic polynomials on $\mathbb{C}^n$ 292
11.2.2. The representations $T^{n\ell\ell'}$ of $U(n)$ 295
11.2.3. Spectral decompositions of the representations $T^{n\ell\ell'}$ 299
11.2.4. The representations $T^{n\sigma k}$ of $U(n-1,1)$ 301
11.2.5. Other realizations of $T^{n\ell\ell'}$ and $T^{n\sigma k}$ 304
11.2.6. The representations T^{nkR} of the group $JU(n-1)$ 306

11.3. Zonal and Associated Spherical Functions 307

11.3.1. The orthonormal basis in $\mathfrak{L}^2(S_C^{n-1})$ 307
11.3.2. Evaluation of zonal spherical functions 308
11.3.3. Asymptotic properties of zonal spherical functions 312
11.3.4. Associated spherical functions 313
11.3.5. Evaluation of associated spherical functions 316
11.3.6. Special cases 321
11.3.7. Symmetry relations 321
11.3.8. Raising and lowering operators 322
11.3.9. Relations between spherical functions for groups of different dimensionalities 323
11.3.10. Relations for zonal spherical functions 325
11.3.11. The connection of spherical functions of the groups $U(n)$ and $IU(n-1)$ with spherical functions of the groups $SO(2n)$ and $ISO(2n-1)$ 326
11.3.12. K_{pq}-spherical functions on the complex sphere 327

11.4. Functional Relations for Jacobi Polynomials and Functions and for Bessel Functions 332
11.4.1. Integral representations 332
11.4.2. Addition theorems for Jacobi polynomials 333
11.4.3. Addition theorems for Jacobi and Bessel functions 336
11.4.4. Expansions in zonal spherical functions of the group $U(n)$ 339
11.4.5. Product formulas for Jacobi and Laguerre polynomials 340
11.4.6. Product formulas for Jacobi and Bessel functions 348
11.4.7. Generating functions 353
11.4.8. Expansion in zonal spherical functions of the group $U(n-1,1)$ 356
11.5. Orthogonal Polynomials on the Disk 359
11.5.1. The definition 359
11.5.2. Integral representation and differential equations 360
11.5.3. The addition theorem and the product formula 361
11.5.4. Special functions on the exterior of the disk 363
11.5.5. Integral representation and differential equations for $f^n_{\sigma k}$ 365
11.6. Matrix Elements of Class 1 Representations 365
11.6.1. Integral representation for matrix elements of the operators $T^{n\sigma k}(g'_{n-1}(t))$ 365
11.6.2. Infinitesimal operators of the representations $T^{n\sigma k}$ 366
11.6.3. Irreducibility of the representations $T^{n\sigma k}$ for non-integral σ 368
11.6.4. Infinitesimal operators of the representations $T^{n\ell\ell'}$ of the group $U(n)$ 370
11.6.5. Infinitesimal operators of the representations T^{nkR} of the group $JU(n-1)$ 370
11.6.6. Matrix elements of finite dimensional representations of the group $GL(n,\mathbf{C})$ 372
11.6.7. Matrix elements of the representations $T^{n\ell\ell'}$ of the group $U(n)$ 374
11.6.8. Matrix elements of the representations $T^{n\sigma k}$ of the group $U(n-1,1)$ 376
11.6.9. Matrix elements of the representations T^{nkR} of the group $JU(n-1)$ 379
11.6.10. Symmetry relations 381
11.6.11. Relations between matrix elements of representations for groups of different dimensionalities 384
11.6.12. The functions $t^{n\ell 0}(g_{n-1}(\theta))$ 386
11.6.13. Special cases of matrix elements of the operators $T^{n\ell\ell'}(g_{n-1}(\theta))$ 387

11.6.14. Special cases of matrix elements of the operators $T^{n\sigma k}(g'_{n-1}(t))$ . . . 388
11.6.15. Special cases of matrix elements of the operators $T^{nkR}(g_r)$ . . . 389
11.6.16. Matrix elements of the operators $T^{n\ell\ell'}\left(g_{n-1}\left(\frac{\pi}{2}\right)\right)$ . . . 390
11.7. Zonal and Associated Spherical Functions of the Groups $Sp(n)$ and $Sp(n-1,1)$ . . . 392
11.7.1. The group $Sp(n)$ and spheres in the quaternion space . . . 392
11.7.2. The group $Sp(n-1,1)$, the hyperboloid and the cone in the quaternion space . . . 395
11.7.3. Invariant measures and Laplace operators . . . 397
11.7.4. Spherical functions of representations of the group $Sp(n)$ . . . 398
11.7.5. The representations $T^{n\sigma}$ of the group $Sp(n-1,1)$ . . . 402
11.7.6. Spherical functions of the representations $T^{n\sigma}$ . . . 404
11.7.7. Expansion in zonal spherical functions of the group $Sp(n-1,1)$ . . . 407
11.7.8. Decomposition of the quasi-regular representation of the group $Sp(n-1,1)$ . . . 408

Chapter 12: Representations of the Heisenberg Group and Special Functions

12.1. Representations of the Heisenberg Group, Hermite and Laguerre Polynomials . . . 410
12.1.1. The Heisenberg group . . . 410
12.1.2. The Lie algebra of the Heisenberg group . . . 411
12.1.3. The exponential mapping . . . 412
12.1.4. Unitary representations . . . 413
12.1.5. The orthonormal basis . . . 414
12.1.6. Matrix elements of the representations R^λ . . . 415
12.1.7. The Fock realization of the representations R^λ . . . 418
12.1.8. Addition formulas for Laguerre polynomials . . . 420
12.1.9. Relations between Laguerre and Hermite polynomials . . . 421
12.1.10. Orthogonal polynomials on $\mathbb{C}$ . . . 423
12.1.11. Decomposition of the regular representation of the Heisenberg group . . . 424
12.2. The Group of Automorphisms of the Heisenberg Group and the Weyl Representation . . . 427
12.2.1. The group of automorphisms for N_1 . . . 427
12.2.2. The group of automorphisms for N_n . . . 428
12.2.3. The group $Sp(n,\mathbb{R}) \times N_n$ . . . 429
12.2.4. The Weyl representation of the group $SL(2,\mathbb{R})$ . . . 430
12.2.5. The integral form of the Weyl representation . . . 434

12.2.6. Infinitesimal operators of the Weyl representation 436
12.3. The Weyl Representation of $Sp(n, \mathbb{R})$ and Bases of the Carrier Space 437
12.3.1. The Weyl representation of the group $Sp(n, \mathbb{R})$ 437
12.3.2. New bases of $\mathfrak{L}^2(\mathbb{R}^n)$ 440
12.3.3. The restriction of the Weyl representation onto $SO(n) \times SL(2, \mathbb{R})$ 442
12.3.4. Transition coefficients for the bases 443
12.3.5. The transition coefficients and Clebsch-Gordan coefficients . . 446
12.3.6. The Weyl transform and the Heisenberg group 447
12.4. Representations of the Group $U(n)N_n$ and Orthogonal Polynomials 451
12.4.1. Representations of the group $U(n)N_{+\mathfrak{n}}$ 451
12.4.2. Matrix elements of the representations T_λ 453
12.4.3. The addition theorem and the product formula for Laguerre polynomials 454
12.4.4. Relations between Laguerre and Jacobi polynomials 455
12.5. The Compact Realization of the Representation of the Heisenberg Group and Orthogonal Polynomials 457
12.5.1. The Weil-Brezin operator and a new realization of the representation $R^{2\pi}$ 457
12.5.2. The Poisson summation formula 460
12.5.3. Summation formulas for Hermite polynomials 461
12.5.4. The expansion in the functions sinc 463
12.5.5. Schempp's summation formula 465
12.6. Harmonic Polynomials on the Heisenberg Group 467
12.6.1. The operator L_γ 467
12.6.2. The operator L_γ and the group $U(n+1, 1)$ 470
12.6.3. Harmonic polynomials on $H(n, \mathbb{R})$ 474
12.6.4. The polynomials $C_n^{(\alpha,\beta)}(\zeta)$ 477
12.6.5. The polynomials $C_n^{(\alpha,\beta)}(\zeta)$ and representations of the group $SO(n)$ 478
12.6.6. Orthogonality relations for $C_n^{(\alpha,\beta)}(\zeta)$ 481
12.6.7. The addition theorem for $C_n^{(\alpha,\beta)}(\zeta)$ 483

Chapter 13: Representations of the Discrete Groups and Special Functions of Discrete Argument

13.1. Representations of the Symmetric Group, Krawtchouk and Hahn Polynomials 485
13.1.1. Introduction 485
13.1.2. Irreducible representations of the symmetric group 485

13.1.3. Zonal spherical functions on the space X_{mn} 487
13.1.4. Semidirect products of symmetric groups and their representations 488
13.1.5. Homogeneous graphs and special functions 490
13.1.6. Addition theorems for Krawtchouk and Hahn polynomials . . 494
13.1.7. Functions, invariant with respect to $S_n \times S_m \times S_k$, and orthogonal polynomials 499

13.2. Groups of Linear Transformations over Finite Fields and q-Analogs of Special Functions 508
13.2.1. Linear spaces over finite fields and Chevalley groups 508
13.2.2. Basic hypergeometric functions and q-analogs of orthogonal polynomials 510
13.2.3. Irreducible representations of Chevalley groups and q-analogs of orthogonal polynomials 518
13.2.4. Functional relations for q-analogs of orthogonal polynomials 524
13.2.5. Functions, invariant with respect to subgroups of block-triangular matrices and q-analogs of orthogonal polynomials in two variables 530

13.3. Special Functions, Related to Locally Compact Totally Disconnected Fields, and Group Representations 540
13.3.1. Characters of locally compact abelian groups 540
13.3.2. The field of p-adic numbers and other totally disconnected locally compact fields 544
13.3.3. The Gamma- and the Beta-functions, related to a field K . . 549
13.3.4. Quadratic extensions of a field K 557
13.3.5. The motion group of the plane $K(\sqrt{\tau})$ and its representations 561
13.3.6. Evaluation of the $\mathfrak{P}$-adic Bessel functions 564
13.3.7. Irreducible representations of the group of unimodular matrices of the second order over the field K 568
13.3.8. Bessel functions of the second kind on K 572
13.3.9. Discrete series of irreducible unitary representations of the group $SL(2, K)$ 574
