

Contents

Introduction.	v
Chapter 1. Hecke algebras	1
Chapter 2. Affine Weyl groups and affine Hecke algebras	18
Chapter 3. A generalized two-sided cell of an affine Weyl group	27
Chapter 4. q_s -analogue of weight multiplicity	44
Chapter 5. Kazhdan-Lusztig classification on simple modules of affine Hecke algebras	48
Chapter 6. An equivalence relation in $T \times \mathbb{C}^*$	63
Chapter 7. The lowest two-sided cell	80
Chapter 8. Principal series representations and induced modules	85
Chapter 9. Isogenous affine Hecke algebras	93
Chapter 10. Quotient algebras	99
Chapter 11. The based rings of cells in affine Weyl groups of type $\tilde{G}_2, \tilde{B}_2, \tilde{A}_2$	102
Chapter 12. Simple modules attached to c_1	116
