Contents

1 Preliminaries 1

1.1 Definitions 1
1.2 Note on sign conventions 4

2 Explicit resolutions 5

2.1 Cyclic groups 5
2.2 Free groups 6
2.3 The bar resolution 7
2.4 Minimal resolutions 11
2.5 Building new resolutions from old resolutions 16

3 Products in cohomology 21

3.1 Definitions 21
3.2 Computations 25
3.3 Connecting homomorphisms and Bocksteins 26
3.4 The Universal Coefficient Theorem 29
3.5 Cohomology rings of direct products and abelian groups 32

4 Relations to cohomology of subgroups 35

4.1 Restriction and the Eckmann–Shapiro Lemma 35
4.2 Transfer or corestriction 38

5 Cohomology of wreath products 45

5.1 Tensor induced modules 45
5.2 Wreath products and the monomial representation 46
5.3 Cohomology of wreath products 49
5.4 Odd degree and other variations on the theme 54

6 The norm map 57

6.1 Definition of the norm map 57
6.2 Proofs of the properties of the norm 59
6.3 The norm map for elementary abelian p-groups 62
6.4 Serre's theorem 64

7 Spectral sequences 69

7.1 The spectral sequence of a double complex 69
7.2 The LHS spectral sequence of a group extension 72
7.3 Multiplicative structure in the spectral sequence 80
7.4 Finiteness theorems 87

8 Varieties and complexity 93

8.1 The variety of a module 93
8.2 Subgroups 97
8.3 Relations with elementary abelian p-subgroups 100
8.4 Complexity 103

9 Stratification 109

9.1 The Quillen stratification of X_G 109
9.2 Quillen's homeomorphism 117
9.3 Avrunin–Scott stratification 122
9.4 The rank variety 124

10 Some related theorems 131

10.1 The tensor product theorem and applications 131
10.2 Varieties and corestriction 138
10.3 Depth 141
