Abstract	vii
List of Symbols	x
1 Introduction	1
2 Examples	7
3 Gaussian polynomials	18
4 Compositions of $n$	20
5 Root subgroups of $G_n$	23
6 Subgroups of $G_n$ associated with compositions	28
7 Coset representatives	30
8 Subgroups of $G_n$ used for induction	35
9 Some idempotent elements of $\overline{KG}_n$	40
10 The permutation module $M_\lambda$	47
11 The Submodule Theorem	56
12 A lower bound for the dimension of $S_\mu$	67
13 The Kernel Intersection Theorem for $S_{(n-m,m)}$	75
14 Reordering the parts of $\lambda$	80
15 The Kernel Intersection Theorem	84
16 Consequences of the Kernel Intersection Theorem	100
17 Removing the first column from $[\lambda]$	109
18 Isotropic spaces	114
19 The prime divisors of Gaussian polynomials	124
20 The composition factors of $S_{(n-m,m)}$	136
Acknowledgements	145
References	146
