

Contents

0	Prerequisites	1
I.	Some General Incompleteness Theorems	1
§0.	Preliminaries.	1
§1.	Some Abstract Incompleteness Theorems.	3
§2.	ω -Consistency.	5
§3.	Rosser's Method.	6
§3.1.	Definability and Complete Representability.	8
II.	Arithmetic, Σ_0 and R.E. Relations	8
§4.	Arithmetic, Σ_0 and R.E. Relations.	8
§5.	Axiomatizable Systems.	10
§6.	Rosser Systems.	11
§7.	The Systems P.A., (Q) and (R).	12
§8.	More on Rosser Systems.	14
§9.	The Non-Axiomatizability of N ; Tarski's Theorem.	15
§10.	More on Separation.	16
§11.	Definability of Functions in \mathcal{S}	17
III.	Shepherdson's Theorems	19
§12.	Shepherdson's Representation Lemma.	20
§13.	Shepherdson's Exact Separation Lemma.	21
I	Recursive Enumerability and Recursivity	23
I.	Some Basic Closure Properties	23
§1.	Some Closure Properties.	23
§2.	Recursive Relations.	26
§3.	Some Consequences.	26
II.	Recursive Pairing Functions	29
§4.	Recursive Pairing Functions.	29
§5.	The Functions $J_n(x_1, \dots, x_n)$	31
III.	Representability and Recursive Enumerability	32
§6.	32

II	Undecidability and Recursive Inseparability	35
I.	Undecidability	35
§1.	Some Preliminary Theorems.	35
§2.	Undecidable Systems.	36
§3.	Non-Recursivity and Incompleteness.	38
§4.	Essential Undecidability.	39
II.	Recursive Inseparability	40
§5.	Recursive Inseparability.	40
§6.	Recursive Inseparability and Incompleteness.	42
III	Indexing	45
I.	The Enumeration Theorem	45
§1.	Indexing.	45
II.	The Iteration Theorem	47
§2.	The Iteration Theorem.	47
III.	Effective Separation	52
§3.	Uniform Separation.	52
IV	Generative Sets and Creative Systems	54
§1.	Productive and Creative Sets.	54
§2.	Many-one Reducibility; Universal Sets.	56
§3.	Representability and Uniform Representability.	58
§4.	Generativity and Incompleteness.	61
V	Double Generativity and Complete Effective Inseparability	63
I.	Complete Effective Inseparability	63
§1.	Complete Effective Inseparability.	63
§2.	Kleene's Construction.	64
§3.	Kleene's Symmetric Form of Gödel's Theorem.	65
§4.	Reducibility and Semi-Reducibility.	65
§5.	Completely E.I. Systems.	67
§6.	Effective Rosser Systems.	68
II.	Double Universality	71
§7.	Double Universality.	71
III.	Double Generativity	72
§8.	Doubly Generative Pairs.	72
§9.	Reducibility.	75
§10.	Sentential Double Generativity.	76
VI	Universal and Doubly Universal Systems	77
I.	Universality	78

§1.	Generativity and Universality.	78
§2.	The Ehrenfeucht-Feferman Theorem.	79
II.	Double Universality	80
§3.	Double Generativity and Double Universality.	80
§4.	Metamathematical Applications.	83
VII	Shepherdson Revisited	84
§1.	Separation Functions.	84
§2.	86
§3.	More on the Shepherdson and Putnam-Smullyan Theorems.	87
VIII	Recursion Theorems	89
I.	Weak Recursion Theorems	90
§1.	The Weak Recursion Theorem.	90
§2.	Unsolvable Problems and Rice's Theorem.	91
II.	The Strong Recursion Theorem	93
§3.	Strong Recursion Theorem.	93
III.	An Extended Recursion Theorem	97
§4.	97
IX	Symmetric and Double Recursion Theorems	99
I.	Double Recursion Theorems	99
§1.	The Weak Double Recursion Theorem.	99
§2.	The Strong Double Recursion Theorem.	101
II.	A Symmetric Recursion Theorem	103
§3.	103
III.	Double Recursion With a Pairing Function	104
§4.	Double Master Functions.	104
§5.	Theorem D and Theorem 2 Compared.	106
IV.	Further Topics	107
§6.	Applications of the Extended Recursion The- orem.	107
§7.	The (Strong) Single and Double Recursion The- orems Compared.	108
§8.	A Very Nice Function.	109
§9.	The n -fold Recursion Theorem.	110
§10.	A General Fixed Point Principle.	111
X	Productivity and Double Productivity	113
I.	Productivity and Double Productivity	113
§1.	Weak Productivity.	113

§2.	Weak Double Productivity.	115
§3.	Effective Inseparability.	118
§4.	A Retrospective Look.	119
XI	Three Special Topics	121
I.	Uniform Reducibility	121
§1.	Uniform Reducibility.	122
§2.	Uniform Reducibility for Pairs.	124
II.	Pseudo-Uniform Reducibility	126
§3.	Pseudo-Uniform Reducibility.	126
§4.	Pseudo-Uniform Reducibility for Pairs.	128
III.	Some Feeble Partial Functions	129
§5.	Feeble Co-Productive and Generative Functions.	129
§6.	Double Analogues.	132
XII	Uniform Gödelization	134
I.	The Sentential Recursion Property	134
§1.	Effectively Gödelian Systems.	135
II.	DSR and Semi-DSR Systems	136
§2.	Rosser Systems For Binary Relations.	137
§3.	Effective Rosser Systems for Sets.	138
§4.	Some Stronger Properties.	139
III.	Rosser Fixed-Point Properties and Uniform Incompleteness	141
§5.	Rosser Fixed Point Properties.	141
§6.	Uniform Incompleteness.	143
§7.	The Weakened Putnam-Smullyan Conditions.	144
IV.	Finale	147
