

CONTENTS

CHAPTER 1 : SETS AND FUNCTIONS	1
1.1. The objects	1
1.2. Ordered sequences and sets	1
1.3. Further notations and definitions concerning sets	3
1.4. Functions	4
1.5. Particular objects	8
CHAPTER 2 : SETS AND FUNCTIONS OF STRINGS	11
2.1. Definitions	11
2.2. String functions	12
2.3. Further notations and definitions	13
2.4. The interpretation of strings	13
2.5. Alphabetic order	14
2.6. Enumeration of strings and n-tuples of strings	15
2.7. Enumeration functions	17
2.8. Calculating the value of the enumeration functions	21
CHAPTER 3 : COMPUTABLE FUNCTIONS	23
3.1. Historical background	23
3.2. The basic idea of Turing	24
3.3. Physical model	24
3.4. Formal definition of a Turing machine	27
3.5. Examples of Turing machines	35
3.6. Computable functions	39
3.7. The thesis of Turing	39
3.8. Normal Turing machines	40
CHAPTER 4 : THE UNIVERSAL TURING MACHINE	45
4.1. The string description of a Turing machine	45
4.2. The universal Turing machine	48
4.3. Discussion	49

CHAPTER 5 : SOME FUNCTIONS WHICH ARE NOT COMPUTABLE	50
5.1. The halting problem	50
5.2. The blank tape halting problem	53
5.3. The uniform halting problem	54
5.4. The equivalence problem	55
5.5. General remark	56
CHAPTER 6 : EFFECTIVELY ENUMERABLE AND DECIDABLE SETS	58
6.1. Introduction	58
6.2. Definitions	58
6.3. Effectively enumerable sets and the domain of computable functions	59
6.4. Effectively enumerable sets and the range of total computable functions	59
6.5. A set which is not effectively enumerable	63
6.6. Decidable sets versus effectively enumerable sets	65
6.7. An effectively enumerable set which is not decidable	66
6.8. Some informal comments	68
APPENDIX 1 : BIBLIOGRAPHICAL NOTES	71
APPENDIX 2 : LIST OF THE MOST IMPORTANT NOTATIONS	72
APPENDIX 3 : LIST OF THE MOST IMPORTANT CONCEPTS	74
