Preface	
Introduction.....	1
Part I	
Boolean Valued Analysis	
Chapter 1 Boolean Valued Analysis Using Projection Algebras	6
§ 1. Hilbert space	6
§ 2. The model $V^{(\mathcal{B})}$	7
§ 3. Real numbers in $V^{(\mathcal{B})}$	15
§ 4. The interpretation of elementary theorems	21
§ 5. Miscellaneous interpretations	29
§ 6. Convergence	31
§ 7. Semi-group of self-adjoint operators	33
§ 8. Complete Boolean algebras of Banach spaces	38
§ 9. Piecewise convergence	40
§ 10. Simultaneous spectrums	42
§ 11. Quantum Logic	46
Chapter 2 Boolean Valued Analysis Using Measure Algebras.....	51
§ 1. Measure algebras	51
§ 2. Real numbers in the model	52
§ 3. Continuous functions in the model	56
§ 4. Baire functions and Borel sets in the model	60
§ 5. Integration and differentiation in the model	63
§ 6. Relation between projection algebras and measure algebras	68
References	71

Part II

A Conservative Extension of Peano Arithmetic

Chapter 1 Real Analysis	77
§ 1. The first system	77

§ 2. The second system	89
§ 3. Defining reals	91
§ 4. Functions	93
§ 5. Sequences	96
§ 6. Continuous functions.....	98
§ 7. Differentiation	101
§ 8. Integration	104
§ 9. Sequences of functions	106
§ 10. Infinite series and series of functions	107
§ 11. Higher derivatives.....	110
§ 12. Functions of several variables	112
 Chapter 2 Complex Analysis	114
§ 1. A system of complex numbers	114
§ 2. Analytic functions	119
§ 3. Integration	122
§ 4. Cauchy's Theorem for nice regions.....	125
§ 5. Cauchy's Integral Formula	127
§ 6. The general form of Cauchy's Theorem.....	132
§ 7. Miscellaneous remarks	133
§ 8. Final remarks.....	134
 References	136
