Preface xi

How to Read this Book xiii

Basic Notations xvii

Introduction 1

Part 1. Not Entirely Naive Set Theory 9

Chapter 1. Pairs, Relations, and Functions 11

Chapter 2. Partial Order Relations 17

Chapter 3. Cardinality 29

Chapter 4. Induction 43
4.1. Induction and recursion over the set of natural numbers 43
4.2. Induction and recursion over wellfounded sets 55

Part 2. An Axiomatic Foundation of Set Theory 69

Chapter 5. Formal Languages and Models 71

Chapter 6. Power and Limitations of the Axiomatic Method 81
6.1. Complete theories 81
6.2. The Incompleteness Phenomenon 92
6.3. Definability 101

Chapter 7. The Axioms 107

Chapter 8. Classes 121

Chapter 9. Versions of the Axiom of Choice 129
9.1. Statements Equivalent to the Axiom of Choice 129
9.2. Set Theory without the Axiom of Choice 143
9.3. The Axiom of Determinacy 148
9.4. The Banach-Tarski Paradox 151

Chapter 10. The Ordinals 155
10.1. The Class **ON** 155
10.2. Ordinal Arithmetic 163

Chapter 11. The Cardinals 173
11.1. Initial Ordinals 173
11.2. Cardinal Arithmetic 176

Chapter 12. Pictures of the Universe 187

Subject Index 205

Index of Notation 209
