Contents

Preface vii

Chapter 1. Sets and Their Cardinalities 1

§1. Sets 1

§2. Cardinality 4

§3. Equal cardinalities 7

§4. Countable sets 9

§5. Cantor Bernstein Theorem 16

§6. Cantor's Theorem 24

§7. Functions 30

§8. Operations on cardinals 35

Chapter 2. Ordered Sets 41

§1. Equivalence relations and orderings 41

§2. Isomorphisms 47

§3. Well-founded orderings 52

§4. Well-ordered sets 56

§5. Transfinite induction 59
§6. Zermelo's Theorem 66
§7. Transfinite induction and Hamel basis 69
§8. Zorn's Lemma and its application 74
§9. Operations on cardinals revisited 78
§10. Ordinals 83
§11. Ordinal arithmetic 87
§12. Recursive definitions and exponentiation 91
§13. Application of ordinals 99

Bibliography 109

Glossary 111
