Preface to the English Edition	xi
Preface	xiii
Chapter 1. Formal Power Series and Generating Functions. Operations with Formal Power Series. Elementary Generating Functions	1
§1.1. The lucky tickets problem	1
§1.2. First conclusions	6
§1.3. Generating functions and operations with them	7
§1.4. Elementary generating functions	10
§1.5. Differentiating and integrating generating functions	12
§1.6. The algebra and the topology of formal power series	13
§1.7. Problems	14
Chapter 2. Generating Functions for Well-known Sequences	17
§2.1. Geometric series	17
§2.2. The Fibonacci sequence	18
§2.3. Recurrence relations and rational generating functions	21
§2.4. The Hadamard product of generating functions	23
§2.5. Catalan numbers	25

§2.6. Problems	30
Chapter 3. Unambiguous Formal Grammars. The Lagrange Theorem	35
§3.1. The Dyck Language	35
§3.2. Productions in the Dyck language	36
§3.3. Unambiguous formal grammars	38
§3.4. The Lagrange equation and the Lagrange theorem	42
§3.5. Problems	43
Chapter 4. Analytic Properties of Functions Represented as Power Series and the Asymptotics of their Coefficients	47
§4.1. Exponential estimates for asymptotics	47
§4.2. Asymptotics of hypergeometric sequences	50
§4.3. Asymptotics of coefficients of functions related by the Lagrange equation	54
§4.4. Asymptotics of coefficients of generating series and singularities on the boundary of the disc of convergence	56
§4.5. Problems	58
Chapter 5. Generating Functions of Several Variables	59
§5.1. The Pascal triangle	59
§5.2. Exponential generating functions	61
§5.3. The Dyck triangle	63
§5.4. The Bernoulli–Euler triangle and enumeration of snakes	64
§5.5. Representing generating functions as continued fractions	72
§5.6. The Euler numbers in the triangle with multiplicities	78
§5.7. Congruences in integer sequences	79
§5.8. How to solve ordinary differential equations in generating functions	82
§5.9. Problems	83
Chapter 6. Partitions and Decompositions	87

---

§6.1. Partitions and decompositions	87
§6.2. The Euler identity	92
§6.3. Set partitions and continued fractions	95
§6.4. Problems	98
Chapter 7. Dirichlet Generating Functions and the Inclusion-Exclusion Principle	101
§7.1. The inclusion-exclusion principle	101
§7.2. Dirichlet generating functions and operations with them	104
§7.3. Möbius inversion	107
§7.4. Multiplicative sequences	109
§7.5. Problems	110
Chapter 8. Enumeration of Embedded Graphs	113
§8.1. Enumeration of marked trees	113
§8.2. Generating functions for non-marked, marked, ordered, and cyclically ordered objects	119
§8.3. Enumeration of plane and binary trees	120
§8.4. Graph embeddings into surfaces	122
§8.5. On the number of gluings of a polygon	132
§8.6. Proof of the Harer-Zagier theorem	136
§8.7. Problems	140
Final and Bibliographical Remarks	143
Bibliography	145
Index	147
