Table of Contents

1. Abstract Expansions 1

1.1 An expansion by antimorphisms of a category 1

1.2 Conjugator between expansions 2

1.3 An expansion with an involution 2

1.4 The trivial expansion 3

1.5 Expansion with the anti-identity as an involution 3

1.6 The separation of an expansion 4

1.7 The pairwise expansion 5

1.8 The induced expansion of a full self-conjugate subcategory 6

1.9 The expansion of Cat. 7

1.10 The opposite of an expansion; contravariant conjugators .. 9

2. Concrete Expansions 11

2.1 K-concrete expansions and expandable K-concrete categories 15

2.3 Induced K-concrete expansions 15

2.4 Concrete categories, concrete expansions and expandable concrete categories 16

3. Examples 18

3.1 Groupoids, semigroups, loops 18

3.2 Bigroupoids; latttices, skew lattices; equational quasigroups; Kimura's isomorphism 21

3.3 Non-associative rings and algebras 27

3.4 Vector spaces and algebras over the complex numbers 31

3.5 A Set - concrete expansion of rings, which is not a concrete expansion 32

3.6 Directed graphs, posets, ordered topological spaces 33

3.7 Some expansions from General Topology 36

3.8 Jordan pairs, alternative pairs, and associative pairs 39

3.9 Superalgebras; graded skew-symmetry; Lie superalgebras 42

4. The Involution Theorem 48

4.1 Involution or reflection for a functor 48

4.2 The involution theorem 48

4.3 Its principal corollary 50

4.4 The involution on free algebras 51

4.7 Examples of 4.2 52

4.8 Examples of 4.3 54

4.9 Examples of 4.4 59

4.10 Examples of 4.6 61

4.11 De Morgan algebras 64

5. ± Monoids and their Actions 65

5.1 ± monoid 65

5.11 Action of a ± monoid 68

5.12 The category M-X 69

5.14 The category of X-objects with an involution 70

5.15 Associative pairs with an involution 71

5.16 The action on a variety 71

5.17 The action on a category with an involution 76

6. Induced Equivalences and Dualities for M-X 79

6.1 The induced equivalence and duality theorems 79

6.2 Spec-M and Todc-M 82

6.3 The dual of $BD^{\pm}$ and expansions of related categories 83

6.4 Subvarieties of M-BD and their duals 88

7. The Creation of Limits and Colimits for M-X 98

7.7 Creation of limits 101

7.12 Creation of colimits 102

7.14 De Morgan algebras 103

7.15 Coproducts of semigroups with an involution and inverse semigroups 104

7.16 A representation of the coproducts of two algebras in M-BD 104

7.17 Coreflective subvarieties of M-X 107

7.18 Liftable properties of the variety X 111

8. Right and Left Adjoints 114

8.8 The right adjoints of $|-|:M\text{-}X \longrightarrow X$ 121

8.16 The left adjoint of $|-|:M\text{-}X \longrightarrow X$ 124

8.17 Free extensions 124

8.18 Free algebras 130

8.19 Concerning the right adjoint 135

8.20 Cogenerators and residual smallness 137

8.21 The congruence extension property 139

8.22 Amalgamation, transferable injections, and injective completeness 141

9. Congruences and M-X-Subdirectly Irreducibles 147

9.1 Principal M-X-congruences 147

9.2 The left action of M on M-X-Con(A), when M is a group 151

9.3 Discriminator varieties 156

9.4 G(A) as a subdirectly irreducible; quasiprimality 157

9.5 A structure theorem; amalgamation; lattice of subvarieties 162

9.6 The dual form for congruences and subdirectly irreducible M-BD-algebras 165

9.7 The nature of the cogenerator, G(2), of M-BD 168
