

Preface	
Notation	
1 Introduction	1
<i>A Historical Overview</i>	
2 Affirmative and refutative assertions	5
<i>In which we see a Logic of Finite Observations and take this as the notion we want to study.</i>	
3 Frames	12
<i>In which we set up an algebraic theory for the Logic of Finite Observations: its algebras are frames.</i>	
3.1 Algebraicizing logic	12
3.2 Posets	13
3.3 Meets and joins	14
3.4 Lattices	18
3.5 Frames	21
3.6 Topological spaces	22
3.7 Some examples from computer science	23
<i>Finite observations on bit streams</i>	23
<i>Different physical assumptions</i>	27
<i>Flat domains</i>	28
<i>Function spaces</i>	29
3.8 Bases and subbases	31
3.9 The real line	32
3.10 Complete Heyting algebras	34

4	Frames as algebras	38
	<i>In which we see methods that exploit our algebraicizing of logic.</i>	
4.1	Semilattices	38
4.2	Generators and relations	39
4.3	The universal characterization of presentations	42
4.4	Generators and relations for frames	46
5	Topology: the definitions	52
	<i>In which we introduce Topological Systems, subsuming topological spaces and locales.</i>	
5.1	Topological systems	52
5.2	Continuous maps	54
5.3	Topological spaces	57
	<i>Spatialization</i>	59
5.4	Locales	60
	<i>Localification</i>	62
5.5	Spatial locales or sober spaces	64
5.6	Summary	67
6	New topologies for old	70
	<i>In which we see some ways of constructing topological systems, and some ways of specifying what they construct.</i>	
6.1	Subsystems	70
6.2	Sublocales	71
6.3	Topological sums	76
6.4	Topological products	80
7	Point logic	89
	<i>In which we seek a logic of points, and find an ordering and a weak disjunction.</i>	
7.1	The specialization preorder	89
7.2	Directed disjunctions of points	92
7.3	The Scott topology	95
8	Compactness	98
	<i>In which we define conjunctions of points and discover the notion of compactness.</i>	
8.1	Scott open filters	98
8.2	The Scott Open Filter Theorem	100
8.3	Compactness and the reals	103
8.4	Examples with bit-streams	105
8.5	Compactness and products	106

8.6	Local compactness and function spaces	110
9	Spectral algebraic locales	116
	<i>In which we see a category of locales within which we can do the topology of domain theory.</i>	
9.1	Algebraic posets	116
9.2	Spectral locales	119
9.3	Spectral algebraic locales	121
9.4	Finiteness, second countability and ω -algebraicity	125
9.5	Stone spaces	127
10	Domain Theory	134
	<i>In which we see how certain parts of domain theory can be done topologically.</i>	
10.1	Why domain theory?	134
10.2	Bottoms and lifting	136
10.3	Products	138
10.4	Sums	139
10.5	Function spaces and Scott domains	142
10.6	Strongly algebraic locales (SFP)	146
10.7	Domain equations	152
11	Power domains	165
	<i>In which we investigate domains of subsets of a given domain.</i>	
11.1	Non-determinism and sets	165
11.2	The Smyth power domain	166
11.3	Closed sets and the Hoare power domain	169
11.4	The Plotkin power domain	171
11.5	Sets implemented as lists	176
12	Spectra of rings	181
	<i>In which we see some old examples of spectral locales.</i>	
12.1	The Pierce spectrum	181
12.2	Quantales and the Zariski spectrum	182
12.3	Cohn's field spectrum	185
	Bibliography	191
	Index	196
