CONTENTS

PREFACE vii

INTRODUCTION 1

CHAPTER 1. POSITIVE ELEMENTARY INDUCTIVE DEFINITIONS . . 6
1A. Monotone operators 6
1B. Relative positive inductive definability 8
1C. Combining inductions 12
1D. Inductive definability on a structure 17
Exercises 20

CHAPTER 2. THE STAGES OF AN INDUCTIVE DEFINITION . . . 27
2A. The Stage Comparison Theorem 27
2B. Closure ordinals and the Closure Theorem . . . 30
Exercises 36

CHAPTER 3. STRUCTURE THEORY FOR INDUCTIVE RELATIONS . . 38
3A. Inductive norms and the Prewellordering Theorem . . 38
3B. Making hyperelementary selections 42
3C. The Boundedness and Covering Theorems 45
3D. Expanding a structure by an inductive relation . . . 47
3E. Generalization of the theory to richer languages . . . 48
Exercises 51

CHAPTER 4. GAMES AND GAME QUANTIFIERS 53
4A. Interpreting quantifier strings via games 53
4B. A canonical form for positive formulas 57
4C. Explicit formulas for inductive relations 59
Exercises 61

CHAPTER 5. ACCEPTABLE STRUCTURES 65
5A. Coding schemes 65
5B. Satisfaction is hyperelementary 67
5C. The quantifier G 70
5D. Parametrizations and universal sets 73
Exercises 76

CHAPTER 6. INDUCTIVE SECOND ORDER RELATIONS 79
6A. Relativization of inductive definitions; examples . . . 79
6B. Transitivity, Substitutivity and Positive Induction Completeness 83
6C. Extension of the theory to second order relations . . 90
6D. The class of hyperelementary relations 97
Exercises 101

CHAPTER 7. SECOND ORDER CHARACTERIZATIONS 103
7A. Inductive and Σ^1_1 relations 103
7B. Quasistrategies 104
7C. The Second Stage Comparison Theorem 108
7D. The Abstract Spector–Gandy Theorem 115
7E. The hierarchy of hyperelementary sets 120
7F. Model theoretic characterizations 129
Exercises 130

CHAPTER 8. COUNTABLE ACCEPTABLE STRUCTURES 132
8A. The Abstract Kleene Theorem 132
8B. The Perfect Set Theorem 135
8C. The intersection of $\mathfrak{A}$-models of second order comprehension 138
8D. Counterexamples to special properties of arithmetic; the language $\mathscr{L}_{\omega_1,G}$ 141
8E. The Suslin–Kleene Theorem 150
Exercises 158

CHAPTER 9. THE NEXT ADMISSIBLE SET 164
9A. Spector classes of relations 164
9B. Examples of Spector classes 168
9C. Structure theory for Spector classes 171
9D. Admissible sets 178
9E. The companion of a Spector class 186
9F. The next admissible set 201
Exercises 205
