

## CONTENTS

	page
1. Introduction .....	5
2. Basic Concepts of Functional Analysis .....	18
2.1 Functions and Functionals .....	18
2.2 Linear Spaces .....	19
2.3 Metric Spaces .....	22
2.4 Normed Spaces .....	24
2.5 Hilbert Spaces .....	26
2.6 Orthogonality .....	28
2.7 Local Concepts .....	32
2.8 Extrema of Functionals .....	37
3. The Convergence Theory for Variational Methods ..	40
3.1 Isoconstrained and Isominimizing Subsets ....	40
3.2 Space of Constraints and Functionals .....	43
3.3 The Approximation Theorems .....	48
3.4 Projection Theorem .....	54
3.5 Generalization of the Projection Theorem ....	56
3.6 Convergence Theorems .....	58
3.7 Discretization Techniques .....	62
3.8 Variational Theorems .....	63
4. Mathematical Theory of Structures .....	65
4.1 Introduction .....	65
4.2 The Generalized Model .....	66
4.3 The Minimum Theorems .....	74
4.4 Isoconstrained and Isominimizing Subsets ....	79
4.5 The Linear Case .....	84
4.6 The Variational Theorems .....	89

	page
4.7 The Generation Methods .....	92
4.8 Interpretation of the Generation Methods .....	102
4.9 Justification of the Generation Methods .....	105
4.10 The Role of Convergence .....	108
4.11 Geometrical Non-Linear Cases .....	110
5. Three-Dimensional Model .....	113
5.1 Introduction .....	113
5.2 Equilibrium Equations .....	114
5.3 Strain-Displacement Equations .....	118
5.4 Stress-Strain Equations .....	120
5.5 Balance of Equations and Unknowns in the Gen- eral Theory .....	123
5.6 Simplified Theory .....	124
5.7 Balance of Equations in the Simplified Theory .	126
5.8 Boundary Conditions in the Simplified Theory ..	129
5.9 The Classical Theory of Elasticity .....	132
6. Two-Dimensional Model .....	134
6.1 Introduction .....	134
6.2 Equilibrium Equations .....	137
6.3 Strain-Displacement Equations .....	140
6.4 Stress-Strain Equations .....	142
6.5 Balance of Equations and Unknowns in the Gen- eral Theory .....	143
6.6 Simplified Theories .....	144
6.7 Balance of Equations in the Simplified Theories	148
6.8 Boundary Conditions in the Simplified Theories	149
6.9 The Classical Theory of Shells .....	151
6.10 Theory of Membranes .....	157
6.11 The Plane Theory .....	159
6.12 Closing Remarks .....	165
7. The Discrete Model .....	167
7.1 The Equations .....	167
7.2 Application of the Potential Energy Method ....	174

---

	page
7.3 Application of the Complementary Energy Method .....	184
7.4 Completeness Criterion .....	187
7.5 Convergence Analysis .....	192
7.6 The Mixed Method .....	201
References .....	215
Contents .....	221
