PREFACE	ix
INTRODUCTION	x
CHAPTER 1. INCLINE ALGEBRA	1
1.1. Basic properties of inclines	1
1.2. Incline structures on lattices	10
1.3. Representations of inclines	17
CHAPTER 2. VECTORS AND MATRICES OVER AN INCLINE	25
2.1. Definition of operations	25
2.2. Basis	29
2.3. Green's relations	34
CHAPTER 3. REGULARITY AND INVERSES ...	41
3.1. Boolean idempotents	41
3.2. Reduction of idempotents over \mathcal{I}	43
3.3. Triangular form	48
3.4. Regularity	51
3.5. Moore-Penrose inverses	56
3.6. Noncommutative inclines and antichains ..	61

CHAPTER 4.	TOPOLOGICAL INCLINES	81
4.1.	Limits and topology	81
4.2.	Characterization of inclines on $[0, 1]$	83
4.3.	N-Dimensional lattices	84
4.4.	One parameter semigroups	91
4.5.	Incline structure on an n-dimensional cube	98
4.6.	Analysis over an incline	99
4.7.	Hilbert spaces over an incline	102
CHAPTER 5.	ASYMPTOTIC FORMS	113
5.1.	Index of Boolean and fuzzy matrices	113
5.2.	Groups in $M_n(7)$ and convergence	115
5.3.	Convergence	118
5.4.	Schein rank and group-theoretic complexity	123
CHAPTER 6.	APPLICATIONS OF INCLINES	131
6.1.	Linear systems	132
6.2.	Applications in probable reasoning, choice and automata	134
6.3.	Applications to graphs, clustering, programming	144
6.4.	Antiinclines and applications to matrix theory	153
