Preface	iii
---------------	-----

Part I: *WHAT CAN LATTICES DO FOR YOU?*

by Garrett Birkhoff

Introduction	1
Boolean logic	2
Dedekind's work	4
Lattice theory begins	6
Lattices and groups	7
Universal algebra	9
Geometric lattices	12
Continuous geometries.	14
Lattices and set theory	19
Current trends in set theory	21
Convergence in lattices	24
Lattice-ordered monoids	27
Lattice-ordered groups.	29
Vector lattices	31
Directed vector spaces	34
Positive linear operators	36
Time-dependent case	37
Bibliography	39

Part II: *THE CURRENT INTEREST IN ORTHOMODULAR
LATTICES*

by Samuel S. Holland, Jr.

Introduction	41
The origin of orthomodular lattice theory	46
Some basic orthomodular lattice theory	79
The principal results	95
Some brief remarks on quantum mechanics	114
Bibliography	117

Part III: *GEOMETRIC LATTICES*

by Henry Crapo and Gian-Carlo Rota

Introduction	127
Geometries and Geometric Lattices	132
Classical Examples	141
Span, bases, minors, and dependence	150
The extension theorem	153
The critical problem	161
Bibliography	167

Part IV: *UNIVERSAL ALGEBRA*

by George Grätzer

Introduction	173
Basic concepts	175
From the Homomorphism theorem to the Jordan-Hölder theorem	176
Algebraic constructions	178
Related structures	181
Free algebras and identities	185
Bases of free algebras	188

The first order language of algebras	193
Free Σ -algebras	199
Some general comments and lattice-theoretic particulars	202
Appendix	211
