Preface, ix

Acknowledgments, xiii

I. Preliminaries, 1

Part 1. Foundations

1. *Basic definitions and terminology*, 1
2. *Partially ordered sets*, 3
3. *Ordinals and cardinals*, 4

Part 2. Universal Algebra

4. *Algebras and homomorphisms*, 6
5. *Direct products*, 8
6. *Congruence relations*, 9
7. *Classes of algebras*, 10
8. *The duality principles*, 12
9. *Subdirect products*, 13
10. *Free algebras*, 14
11. *Polynomials and identities*, 15
12. *Birkhoff's characterization of equational classes*, 17

Part 3. Categories

13. *Definition of a category*, 20
14. *Special morphisms*, 21
15. *Products and coproducts. Limits and colimits*, 23
16. *Injectives and projectives*, 24
17. *Functors*, 25
18. *Reflective subcategories*, 27
19. *Categories of algebras*, 30
20. *Equational categories*, 31

II. Lattices

1. *Partially ordered sets (continued)*, 39
2. *Definition of a lattice*, 42
3. *Lattices as algebras and categories*, 43
4. *Complete lattices and closure operators*, 45
5. *The distributive law*, 48
6. *Complements, Boolean algebras*, 51
7. *Relatively complemented distributive lattices*, 54
8. *The various categories*, 56
9. *Ideals and congruence relations*, 57
10. *Subdirect product representation for distributive lattices*, 63

III. The Prime Ideal Theorem

1. *Irreducible elements*, 65
2. *The descending chain condition*, 66
3. *Prime ideals and maximal ideals*, 67
4. *The prime ideal theorem*, 70
5. *Representation by sets*, 71
6. *Some corollaries of the prime ideal theorem*, 72

IV. Topological Representations

1. *Stone spaces*, 75
2. *Topological representation theory for* $\mathscr{D}_{01}$, 79
3. *Topological representation theory for* $\mathscr{B}$, 81

V. Extension Properties

1. *Subalgebras generated by sets*, 85
2. *Extending functions to homomorphisms*, 86
3. *Free algebras*, 88
4. *Free Boolean extensions*, 97
5. *Embedding of relatively complemented distributive lattices in Boolean algebras*, 101
6. *Free relatively complemented distributive extensions*, 102
7. *Boolean algebras generated by a chain. Countable Boolean algebras*, 105
8. *Monomorphisms and epimorphisms*, 109
9. *Injectives in* $\mathscr{D}$, $\mathscr{D}_{01}$ *and* $\mathscr{B}$, 112
10. *Weak projectives in* $\mathscr{D}$ *and* $\mathscr{D}_{01}$, 114

VI. Subdirect Products of Chains

1. *Introduction*, 119
2. *Definitions, some basic theorems, and an example*, 120

3. *Basic K-chains*, 121
4. *The classes* $\mathbf{C}_n$ *for* $n \geq 3$. *Locally separated* **n***-chains*, 122
5. *The class* $\mathbf{C}_3$, 125
6. *A structure theorem for* $\mathbf{C}_3$, 127
7. *Maximal ideals and Nachbin's theorem*, 129
8. *Subdirect products of infinite chains*, 130

VII. Coproducts and Colimits

1. *Existence and characterization of coproducts in* $\mathscr{D}$, $\mathscr{D}_{01}$ *and* $\mathscr{B}$, 132
2. *The coproduct convention*, 135
3. *The center of the coproduct in* $\mathscr{D}_{01}$, 136
4. *Structure theorems for coproducts of Boolean algebras and chains*, 138
5. *Rigid chains*, 142
6. *Uniqueness of representation of coproducts of Boolean algebras and chains*, 144
7. *The representation space of coproducts in* $\mathscr{D}_{01}$ *and* $\mathscr{B}$, 147
8. *Colimits*, 149

VIII. Pseudocomplemented Distributive Lattices

1. *Definitions and examples*, 151
2. *Basic properties*, 153
3. *The class* $\mathbf{B}_\omega$, 155
4. *Glivenko's theorem and some implications*, 156
5. *Subdirectly irreducible algebras in* $\mathbf{B}_\omega$, 159
6. *The equational subclasses of* $\mathbf{B}_\omega$, 161
7. *Stone algebras*, 164
8. *Injective Stone algebras*, 168
9. *Coproducts of Stone algebras. Free Stone algebras*, 171

IX. Heyting Algebras

1. *Introduction*, 173
2. *Definitions*, 173
3. *Examples*, 177
4. *The class* **H**, 177
5. *Some fundamental theorems*, 179
6. *Free Heyting algebras*, 182
7. *Finite weakly projective Heyting algebras*, 185

X. Post Algebras

1. *Introduction*, 191
2. *Definitions and basic properties*, 192
3. *The category of Post algebras*, 195

4. *Representation theory*, 197
5. *The partially ordered set of prime ideals of a Post algebra*, 198
6. *Post algebras as equational classes of algebras*, 200
7. *Coproducts in* $\mathscr{P}_n$ *and free Post algebras*, 202
8. *Generalized Post algebras*, 203
9. *Stone algebras of order n*, 205

XI. De Morgan Algebras and Lukasiewicz Algebras

1. *Introduction*, 211
2. *De Morgan algebras. Basic properties and representation theory*, 212
3. *Equational subclasses of* **M**, 215
4. *Coproducts of de Morgan algebras. Free de Morgan algebras*, 216
5. *Lukasiewicz algebras. Definitions and basic theorems*, 218
6. *Post algebras as special cases of Lukasiewicz algebras*, 221
7. *A representation theory for Lukasiewicz algebras*, 223
8. *The partially ordered set of prime ideals of a Lukasiewicz algebra*, 224
9. *Embedding of Lukasiewicz algebras in Post algebras. Injective objects in* $\mathscr{L}_n$, 224
10. *Free Lukasiewicz algebras*, 226

XII. Complete and α-Complete Distributive Lattices

1. *Introduction. Definitions and some theorems*, 228
2. *Normal completion of lattices. The special case of distributive lattices*, 233
3. *The normal completion of a Boolean algebra*, 240
4. *Complete, completely distributive lattices*, 243
5. *Representation of distributive,* α*-complete lattices*, 250
