

Contents

Chapter I.	The Informal Algebra of Classes	1
	Union, intersection and complementation. The commutative, associative and distributive laws. Difference and symmetric difference. Venn diagrams.	
	Examples I	18
Chapter II.	The Self-Dual System of Axioms	21
	Standard forms. Completeness of the axiom systems. Independence of the axioms. An algebra of pairs. Isomorphism and homomorphism.	
	Examples II	47
Chapter III.	Boolean Equations	49
	A bi-operational system of axioms. Equivalence of the two formalizations. The general solutions of Boolean equations. Congruence relations. Independence of the axioms.	
	Examples III	73
Chapter IV.	Sentence Logic	76
	Sentence logic as a model of Boolean algebra. The third system of axioms. Truth-table completeness. Independence of the axioms. The deduction theorem.	
	Examples IV	92

Chapter V.	Lattices	94
	Partially ordered sets. Atoms, minimal and maximal elements. Upper and lower bounds. Distributive lattices. Complemented distributive lattices. Union and intersection ideals. The lattice of union ideals. Representation theorems for Boolean algebras. A denumerable Boolean algebra. Newman algebra.	
	Examples V	119
	Solutions to Examples	122
	Bibliography	137
	Index	139
