	<i>Preface</i>	vii
	<i>Advice to the reader</i>	ix
	<i>Introduction: Stone's Theorem in historical perspective</i>	xii
<b>I</b>	<b>Preliminaries</b>	1
1	Lattices	1
2	Ideals and filters	11
3	Some categorical concepts	15
4	Free lattices	25
	Notes on chapter I	35
<b>II</b>	<b>Introduction to locales</b>	39
1	Frames and locales	39
2	Sublocales and sites	48
3	Coherent locales	62
4	Stone spaces	69
	Notes on chapter II	76
<b>III</b>	<b>Compact Hausdorff spaces</b>	80
1	Compact regular locales	80
2	Manes' Theorem	92
3	Gleason's Theorem	98
4	Vietoris locales	111
	Notes on chapter III	119
<b>IV</b>	<b>Continuous real-valued functions</b>	123
1	Complete regularity and Urysohn's Lemma	123

2	The Stone–Čech compactification	130
3	$C(X)$ and $C^*(X)$	142
4	Gelfand duality	152
	Notes on chapter IV	164
<b>V</b>	<b>Representations of rings</b>	169
1	A crash course in sheaf theory	169
2	The Pierce spectrum	181
3	The Zariski spectrum	191
4	Ordered rings and real rings	206
	Notes on chapter V	220
<b>VI</b>	<b>Profinite sets and duality</b>	224
1	Ind-objects and pro-objects	224
2	Profinite sets and algebras	233
3	Stone-type dualities	246
4	General concrete dualities	253
	Notes on chapter VI	267
<b>VII</b>	<b>Continuous lattices</b>	270
1	Compact topological (semi) lattices	270
2	Continuous posets and lattices	286
3	Lawson semilattices	297
4	Locally compact locales	308
	Notes on chapter VII	321
	<i>Bibliography</i>	324
	<i>Index of categories</i>	364
	<i>Index of other symbols</i>	366
	<i>Index of definitions</i>	368
