Contents

Introduction ix

1 Preliminaries 1
- 1.1 The Concept of a Variety . . . 1
- 1.2 Congruences and Free Algebras . . . 2
- 1.3 Congruence Distributivity . . . 5
- 1.4 Congruences on Lattices . . . 10

2 General Results 13
- 2.1 The Lattice Λ . . . 13
- 2.2 The Structure of the Bottom of Λ . . . 17
- 2.3 Splitting Lattices and Bounded Homomorphisms . . . 20
- 2.4 Splitting lattices generate all lattices . . . 41
- 2.5 Finite lattices that satisfy (W) . . . 44

3 Modular Varieties 46
- 3.1 Introduction . . . 46
- 3.2 Projective Spaces and Arguesian Lattices . . . 47
- 3.3 n-Frames and Freese's Theorem . . . 57
- 3.4 Covering Relations between Modular Varieties . . . 69

4 Nonmodular Varieties 77
- 4.1 Introduction . . . 77
- 4.2 Semidistributivity . . . 78
- 4.3 Almost Distributive Varieties . . . 86
- 4.4 Further Sequences of Varieties . . . 104

5 Equational Bases 115
- 5.1 Introduction . . . 115
- 5.2 Baker's Finite Basis Theorem . . . 116
- 5.3 Joins of finitely based varieties . . . 120
- 5.4 Equational Bases for some Varieties . . . 126

6 Amalgamation in Lattice Varieties 128
- 6.1 Introduction . . . 128
- 6.2 Preliminaries . . . 129

6.3 Amal($\mathcal{V}$) for Residually Small Varieties 132
6.4 Products of absolute retracts 134
6.5 Lattices and the Amalgamation Property 135
6.6 Amalgamation in modular varieties 137
6.7 The Day – Ježek Theorem 141
6.8 Amal($\mathcal{V}$) for some lattice varieties 145

Bibliography 149
