

TABLE OF CONTENTS

PART ONE—GRAPHS

CHAPTER 1. BASIC CONCEPTS

1. Graphs	3
2. Basic definitions	5
3. List of symbols	9

CHAPTER 2. CYCLOMATIC NUMBER

1. Cycles and cocycles	12
2. Cycles in a planar graph	17

CHAPTER 3. TREES AND ARBORESCENCES

1. Trees and cotrees	24
2. Strongly connected graphs and graphs without circuits	28
3. Arborescences	32
4. Injective, functional and semi-functional graphs	36
5. Counting trees	42

CHAPTER 4. PATHS, CENTRES AND DIAMETERS

1. The path problem	55
2. The shortest path problem	59
3. Centres and radii of a quasi-strongly connected graph	61
4. Diameter of a strongly connected graph	66
5. Counting paths	74

CHAPTER 5. FLOW PROBLEMS

1. The maximum flow problem	76
2. The compatible flow problem	86
3. An algebraic study of flows and tensions.	89
4. The maximum tension problem	95

CHAPTER 6. DEGREES AND DEMI-DEGREES

1. Existence of a p -graph with given demi-degrees	102
2. Existence of a p -graph without loops with given demi-degrees	109
3. Existence of a simple graph with given degrees	115

CHAPTER 7. MATCHINGS

1. The maximum matching problem	122
2. The minimum covering problem	129
3. Matchings in bipartite graphs	131
4. An extension of the König theorem	141
5. Counting perfect matchings	142

CHAPTER 8. c -MATCHINGS

1. The maximum c -matching problem	150
2. Transfers	153
3. Maximum cardinality of a c -matching	155

CHAPTER 9. CONNECTIVITY

1. h -Connected graphs	164
2. Articulation vertices and blocks	175
3. k -Edge-connected graphs	181

CHAPTER 10. HAMILTONIAN CYCLES

1. Hamiltonian paths and circuits	186
2. Hamiltonian paths in complete graphs	192
3. Existence theorems for hamiltonian circuits	195
4. Existence theorems for hamiltonian cycles	204
5. Hamilton-connected graphs	217
6. Hamiltonian cycles in planar graphs (<i>abstract</i>)	223

CHAPTER 11. COVERING EDGES WITH CHAINS

1. Eulerian cycles	228
2. Covering edges with disjoint chains	232
3. Counting eulerian circuits	239

CHAPTER 12. CHROMATIC INDEX

1. Edge colourings	248
2. The Vizing theorem and related results	254
3. Edge colourings of planar graphs (<i>abstract</i>)	267

CHAPTER 13. STABILITY NUMBER

1. Maximum stable sets	272
2. The Turán theorem and related results	278
3. α -Critical graphs	285
4. Critical vertices and critical edges	297
5. Stability number and vertex coverings by paths	298

CHAPTER 14. KERNELS AND GRUNDY FUNCTIONS

1. Absorption number	303
2. Kernels	307
3. Grundy functions	312
4. Nim games	318

CHAPTER 15. CHROMATIC NUMBER

1. Vertex colourings	325
2. γ -Critical graphs	338
3. The Hajós theorem	350
4. Chromatic polynomials	352
5. Vertex colourings of planar graphs (<i>abstract</i>)	355

CHAPTER 16. PERFECT GRAPHS

1. Perfect graphs	360
2. Comparability graphs	363
3. Triangulated graphs	368
4. i -Triangulated graphs	369
5. Interval graphs	371
6. Cartesian product and Cartesian sum of simple graphs	376

PART TWO—HYPERGRAPHS

CHAPTER 17. HYPERGRAPHS AND THEIR DUALS

1. Hypergraphs	389
2. Cycles in a hypergraph	391
3. Conformal hypergraphs	396
4. Representative graph of a hypergraph	400

CHAPTER 18. TRANSVERSALS

1. Matchings and c -matchings	414
2. Transversal number	420

CHAPTER 19. CHROMATIC NUMBER OF A HYPERGRAPH

- | | |
|--|-----|
| 1. Stability number and chromatic number of a hypergraph | 428 |
| 2. Cliques of a hypergraph | 432 |
| 3. Good colourings of the edges of a graph. | 440 |
| 4. Generalizations of the chromatic number of a graph | 443 |

CHAPTER 20. BALANCED HYPERGRAPHS AND UNIMODULAR HYPERGRAPHS

- | | |
|--------------------------------------|-----|
| 1. Strong chromatic number | 448 |
| 2. Balanced hypergraphs | 450 |
| 3. Unimodular hypergraphs | 463 |
| 4. Stochastic functions | 469 |

CHAPTER 21. MATROIDS

- | | |
|---|-----|
| 1. Matroid on a set | 476 |
| 2. The Rado theorem and related results | 481 |
| 3. Image of a matroid | 486 |
| 4. Minimum weight basis | 493 |
