TABLE OF CONTENTS

Introduction	VII
Conventions, assumptions, notations	ΧI
A. Some remarks about the problem of graph identification	1
B. Motivation (after A. Lehman)	5
C. A construction of a stationary graph (after A. Lehman)	13
D. Properties of cells (after A. Lehman)	23
E. Properties of cellular algebras of rank greater than one	29
F. Cellular algebras arising in the theory of permutation groups	38
G. Some classes of cellular algebras	41
H. Imprimitive cells and construction of factor-cells (after A. Lehman)	48
I. Construction of the quotient in the case of cellular algebras of rank	
greater than one (after A. Lehman, B. Weisfeiler)	58
J. On the structure of correct stationary graphs and cells having more	•
than one normal subcell	60
K. Properties of primitive cells (after A. Lehman)	71
L. Algebraic properties of cellular algebras	76
	99
M. Some modifications of stabilization	104
N. Kernels and stability with respect to kernels	111
O. Deep stabilization	123
P. Examples of results using stability of depth 1	12.
Q. Some definitions and explanations about exhaustive search (after	129
G. M. Adelson-Velsky, V. Arlazarov, B. Weisfeiler)	138
R. An algorithm of graph canonization	130
S. A practical algorithm of graph canonization (after V. Arlazarov,	145
I. Faragev, A. Uskov, I. Zuev)	151
T. An algorithm of construction of strongly regular graphs (after M. Rosenfeld)	1.71
U. Tables of strongly regular graphs with $ n \text{vertices} , 10 \leq n \leq 28 \text{(after)} $	159
M. Rosenfeld)	
V. Some properties of 25- and 26-families (after M. Rosenfeld)	186
Appendix	
AA. A graphical regular representation of Sym(n) (after A. Lehman)	193
and an Atabateat to Autat Tarketanian to the same to t	195
	203
AC. One more example of a cell with one generator	207
AD. Deep constants	213
AE. Algebraic invariants of finite graphs	217
AG. Conjectures	21/
Bibliography	219
Distribution of the bibliography per topics	226
Index of notations	227
Subject index	230
