PART ONE - GRAPHS AND DIGRAPHS

Chapter 1 Graphs	1
Graphs as Models	1
Paths and Connectedness	8
Cutnodes and Blocks	16
Graph Classes and Graph Operations	21
Chapter 2 Centers	31
The Center and Eccentricity	31
Self-Centered Graphs	38
The Median	42
Central Paths	47
Other Generalized Centers	50
Chapter 3 Connectivity	59
Connectivity and Edge-Connectivity	60
Menger's Theorem	64
Properties of n -Connected Graphs	68
Circulants	73
Chapter 4 Hamiltonicity	77
Necessary or Sufficient Conditions	77
Connectivity and Hamiltonicity	83
Graph Operations and Hamiltonicity	86
Generalizations of Hamiltonicity	90

Chapter 5 Extremal Distance Problems	95
Radius	95
Small Diameter	100
Diameter	105
Long Paths and Long Cycles	110
Chapter 6 Matrices	117
The Adjacency Matrix	117
The Incidence Matrix	122
The Distance Matrix	127
Chapter 7 Convexity	135
Closure Invariants	135
Metrics on Graphs	141
Geodetic Graphs	146
Distance-Hereditary Graphs	150
Chapter 8 Symmetry	155
Groups	155
Symmetric Graphs	162
Distance Symmetry	166
Chapter 9 Distance Sequences	173
The Eccentric Sequence	173
Distance Sequences	179
The Distance Distribution	186
Path Sequences	194
Other Sequences	199
Chapter 10 Digraphs	205
Digraphs and Connectedness	205
Acyclic Digraphs	210
Matrices and Eulerian Digraphs	213
Long Paths in Digraphs	217
Tournaments	221

PART TWO - NETWORKS AND ALGORITHMS

Chapter 11 Graph Algorithms	225
Polynomial Algorithms and \mathcal{NP} -Completeness	225
Path Algorithms and Spanning Trees	232
Centers	237
Maximum Matchings	243
Two \mathcal{NP} -Complete Problems	248
Chapter 12 Networks	255
The Max-Flow Min-Cut Theorem	255
Minimum Spanning Trees	260
Traveling Salesman Problem	265
Shortest Paths	270
Centers	275
Critical Path Method	277
Appendix	282
References	289
Index	327
