Contents

1 Motivation **5**

2 Network Survivability Models Using Node Types **7**

2.1 Survivable Telephone Networks 7
2.2 Graph-theoretic Formulation 9
2.3 Integer LP-Formulation and Associated Polyhedra 14
2.4 An Outline of the Cutting Plane Procedure 16
2.5 Outlook on the Contents 17

3 Survivable Network Design under Connectivity Constraints — a Survey **19**

3.1 Polynomially Solvable Cases 21
3.2 Results for Restricted Costs 25
3.3 Heuristics for General Costs 27
3.4 Exact Algorithms for General Costs 30

4 Decomposition **33**

4.1 Bridges, Articulation Nodes, and Paths 34
4.2 Articulation Sets of Size 2 for 2NCON 34
4.3 Articulation Sets of Size 2 for 1ECON 36
4.4 Cutsets of Size 3 for 2CON 40
4.5 Cutsets of Size k for kCON 44

5 Basic Inequalities **49**

5.1 Dimension and Trivial Inequalities 49
5.2 Cut Constraints for Low-Connectivity 51
5.3 Cut Constraints for kECON 55
5.4 Node Cut Constraints for 2NCON 63
5.5 (Node) Cut Constraints for kNCON 66

6 Lifting Theorems **69**

6.1 Expansion of Nodes 70
6.2 Addition of Edges 73
6.3 Addition of Nodes of Type 1 74

7 Partition Inequalities 77
7.1 Motivation . . . 77
7.2 Facet Results for kECON . . . 79
7.3 Facet Results for kNCON . . . 85
7.4 Facet Results for Low Connectivity . . . 88

8 Node Partition Inequalities 91
8.1 Generalization of Node Cut Constraints . . . 91
8.2 Validity . . . 93
8.3 Facet Results . . . 94

9 Lifted r-Cover Inequalities 101
9.1 Motivation . . . 101
9.2 r-Cover Inequalities . . . 103
9.3 Lifted r-Cover Inequalities . . . 109

10 Comb Inequalities 113
10.1 Comb Inequalities for 2NCON . . . 113
10.2 Comb Inequalities for kNCON . . . 117
10.3 Comb Inequalities for 2ECON . . . 119

11 How to Find Valid Inequalities 125
11.1 Related Polyhedra . . . 126
11.1.1 Special Cases . . . 126
11.1.2 Relaxation . . . 127
11.1.3 Subfaces . . . 128
11.1.4 Projection and Prodon Inequalities . . . 130
11.2 Small Polyhedra . . . 134
11.3 Generalization of Validity Proofs . . . 142
11.4 Fractional Solutions . . . 146
11.5 Redundant Inequalities . . . 150
11.5.1 Little-Man Inequalities . . . 152
11.6 Open Problems . . . 153

12 Implementation of the Cutting Plane Algorithm 155
12.1 The Framework . . . 155
12.2 Complexity of the Separation Problems . . . 157
12.3 Separating Partition Inequalities . . . 161
12.3.1 Transforming Cuts into Partitions . . . 162
12.3.2 Shrinking Criteria for Partition Inequalities . . . 165
12.4 Separating Node Partition Inequalities . . . 166
12.5 Separating Lifted r-Cover Inequalities . . . 168
12.5.1 Shrinking One-Paths . . . 170
12.5.2 The Padberg-Rao Algorithm . . . 170
12.5.3 Converting H, T into a Lifted r-Cover Constraint . . . 172
12.6 Other Details . . . 172

13 Computational Results **175**
13.1 Low-Connectivity Problems 175
13.2 High-Connectivity Problems 183
13.2.1 Random Problems 183
13.2.2 The Ship Problem 187

Conclusion **195**

Bibliography **197**

Index **205**
