

CONTENTS

Preface	v
1 Logic	1
1.1 Statements, Propositions, and Theorems	1
1.2 Logical Connectives and Truth Tables	6
1.3 Conditional Statements	12
1.4 Proofs: Structures and Strategies	18
1.5 Logical Equivalence	28
1.6 Application: A Brief Introduction to Switching Circuits	33
2 Sets	39
2.1 Fundamentals	39
2.2 Russell's Paradox	48
2.3 Quantifiers	49
2.4 Set Inclusion	57
2.5 Union, Intersection, and Complement	62
2.6 Indexed Sets	68
2.7 The Power Set	76
2.8 Ordered Pairs and Cartesian Products	80
2.9 Set Decomposition: Partitions and Relations	87
2.10 Mathematical Induction and Recursion	102

3 Functions	117
3.1 Definitions and Examples	117
3.2 Surjections, Injections, Bijections, Sequences	126
3.3 Composition of Functions	141
4 Finite and Infinite Sets	151
4.1 Cardinality; Fundamental Counting Principles	151
4.2 Comparing Sets, Finite or Infinite	169
4.3 Countable and Uncountable Sets	176
4.4 More on Infinity	187
4.5 Languages and Finite Automata	188
5 Permutations and Combinations	205
5.1 Combinatorial Problems	205
5.2 The Addition and Product Rules (review)	209
5.3 Introduction to Permutations	211
5.4 Permutations and Geometric Symmetry	222
5.5 Decomposition into Cycles	229
5.6 Computing the Order of a Permutation; A Card-Shuffling Example	243
5.7 Odd and Even Permutations; Applications to Configurations	250
5.8 Binomial and Multinomial Coefficients	261
6 Number Theory	281
6.1 Operations	282
6.2 The Integers: Operations and Order	287
6.3 Divisibility: The Fundamental Theorem of Arithmetic	291
6.4 Congruence; Divisibility Tests	306
6.5 Introduction to Euler's Function	313
6.6 The Inclusion–Exclusion Principle, and Further Properties of Euler's Function	319
Hints and Partial Solutions to Selected Odd-Numbered Exercises	329
Index	345
