Contents

1	**Introduction and basic concepts**	1
1.1	An assortment of problems	2
1.2	Numbers and sets: notation	7
1.3	Mathematical induction and other proofs	16
1.4	Functions	25
1.5	Relations	32
1.6	Equivalences	36
1.7	Ordered sets	40
2	**Combinatorial counting**	47
2.1	Functions and subsets	47
2.2	Permutations and factorials	52
2.3	Binomial coefficients	55
2.4	Estimates: an introduction	66
2.5	Estimates: the factorial function	73
2.6	Estimates: binomial coefficients	81
2.7	Inclusion–exclusion principle	86
2.8	The hatcheck lady & co.	91
3	**Graphs: an introduction**	97
3.1	The notion of a graph; isomorphism	97
3.2	Subgraphs, components, adjacency matrix	106
3.3	Graph score	112
3.4	Eulerian graphs	117
3.5	An algorithm for an Eulerian tour	123
3.6	Eulerian directed graphs	127
3.7	2-connectivity	132
4	**Trees**	138
4.1	Definition and characterizations of trees	138
4.2	Isomorphism of trees	144
4.3	Spanning trees of a graph	151
4.4	The minimum spanning tree problem	155
4.5	Jarník's algorithm and Borůvka's algorithm	161

5 Drawing graphs in the plane 167
5.1 Drawing in the plane and on other surfaces 167
5.2 Cycles in planar graphs 174
5.3 Euler's formula 181
5.4 Coloring maps: the four-color problem 191

6 Double-counting 202
6.1 Parity arguments 202
6.2 Sperner's theorem on independent systems 211
6.3 A result in extremal graph theory 218

7 The number of spanning trees 223
7.1 The result 223
7.2 A proof via score 224
7.3 A proof with vertebrates 226
7.4 A proof using the Prüfer code 229
7.5 A proof working with determinants 231

8 Finite projective planes 240
8.1 Definition and basic properties 240
8.2 Existence of finite projective planes 250
8.3 Orthogonal Latin squares 255
8.4 Combinatorial applications 258

9 Probability and probabilistic proofs 262
9.1 Proofs by counting 262
9.2 Finite probability spaces 269
9.3 Random variables and their expectation 279
9.4 Several applications 285

10 Generating functions 294
10.1 Combinatorial applications of polynomials 294
10.2 Calculation with power series 298
10.3 Fibonacci numbers and the golden section 309
10.4 Binary trees 317
10.5 On rolling the dice 322
10.6 Random walk 323
10.7 Integer partitions 326

11 Applications of linear algebra 333
11.1 Block designs 333
11.2 Fisher's inequality 338

11.3 Covering by complete bipartite graphs 342
11.4 Cycle space of a graph 345
11.5 Circulations and cuts: cycle space revisited 349
11.6 Probabilistic checking 353

Appendix: Prerequisites from algebra 363

Bibliography 371

Hints to selected exercises 377
