Contents

		Preface	ix
		Letter to the Student	xiii
Chapter 1		**Groups: Definitions and Examples**	1
	1.1	Binary Operations	3
	1.2	Groups	13
	1.3	Elementary Properties of Groups	20
	1.4	A Binary Operation for Sets of Functions	25
	1.5	Permutation Groups	35
	1.6	Groups of Symmetries of Geometrical Figures	44
	1.7	Congruence Modulo n	49
	1.8	The Additive Groups $\mathbf{Z}_n$	54
		Review	60
Chapter 2		**Theory of Groups, I**	63
	2.1	Subgroups	64
	2.2	Orders of Elements	73
	2.3	Lagrange's Theorem and Cosets	79
	2.4	Homomorphisms	88
	2.5	Isomorphisms	96
	2.6	Cyclic Groups	104
	2.7	Normal Subgroups	109
	2.8	Quotient Groups	116
	2.9	Homomorphic Images and Quotient Groups	123
	2.10	A Bit of History	134
		Review	139
Chapter 3		**Rings, Integral Domains, and Fields**	143
	3.1	Rings: Definition and Examples	144
	3.2	Elementary Properties of a Ring	150
	3.3	Subrings and Ideals	153
	3.4	Homomorphisms	160
	3.5	Polynomial Rings	166
	3.6	Integral Domains	176

	3.7	Fields	181
	3.8	Fields of Quotients	193
		Review	199
Chapter 4		**Group Theory, II**	203
	4.1	Cycles and Transpositions in Permutation Groups	204
	4.2	Even and Odd Permutations	214
	4.3	Automorphisms and Conjugates	220
	4.4	External Direct Products	226
	4.5	Internal Direct Products	232
		Review	236
Chapter 5		**Quotient Rings and Ideals**	239
	5.1	Ideals in Polynomial Rings	240
	5.2	Quotient Rings	250
	5.3	Prime Ideals and Their Quotient Rings	255
	5.4	Maximal Ideals and Their Quotient Rings	258
	5.5	Maximal Ideals in Rings of Functions	263
		Review	269
Appendixes	1	Sets	271
	2	Logic and Methods of Proof	272
	3	Algebraic and Order Properties of Numbers	287
	4	Equivalence Relations	290
	5	Well-Ordering and Induction	295
	6	Some Arithmetical Properties of Integers	305
		Hints for Problems	320
		Hints for Exercises	323
		Bibliography	329
		General Index	331
		Index of Symbols	335
