PREFACE	3
CONTENTS	5
SCIENTIFIC PROGRAM	7
LIST OF PARTICIPANTS	10
H. Andr�eka – I. N�emeti , On the congruence lattice of pseudo-simple algebras	15
B. Banaschewski – E. Nelson , Elementary properties of limit reduced powers with applications to Boolean powers	21
H.-J. Bandelt , On congruence lattices of 2-valued algebras	27
E. Beutler , The c -ideal lattice and subalgebra lattice are independent	33
B. Bosbach , l -group-cone and Boolean algebra. A common one-identity-axiom	41
A. Day , Splitting lattices and congruence modularity	57
J. Dudek – K. G�l�zek , Some remarks on weak automorphisms ...	73
G. Eigenthaler , On polynomial algebras	83
S. Fajtlowicz , Duality for algebras	101
V. Fleischer , Projective and injective varieties of Abelian Ω -algebras	113
R. Freese , Some varieties of modular lattices not generated by their finite dimensional members	133
K. G�l�zek – T. Hecht – T. Katri�n�ak , On weak homomorphisms of Stone algebras	145
E. Graczy�nska , On the sums of double systems of lattices and DS -congruences of lattices	161
A.P. Huhn , n -distributivity and some questions of the equational theory of lattices	167
H. Hule , Polynomial normal forms and the embedding of polynomial algebras	179
A.A. Iskander , Coverings in the lattice of varieties	189
A. Iwanik , Embedding semigroups in semigroups generated by idempotents	205

J. Ježek , Endomorphism semigroups and subgroupoid lattices	209
R. John , A note on implicational subcategories	213
B. Jónsson – J.B. Nation , A report on sublattices of a free lattice	223
T. Kepka , Extensive groupoid varieties	259
M. Kolibiar , Primitive subsets of algebras	287
G. Matthiessen , Ideals, normal sets and congruences	295
P. Mederly , A characterization of complete modular p -algebras . . .	311
R. Mlitz , Jacobson's density theorem in universal algebra	331
A. Petrescu , Certain questions of the theory of homotopy of universal algebras	341
W. Poguntke – I. Rival , A theorem on finite sublattices of free lattices	357
R.W. Quackenbush , A note on a problem of Goralčík	363
J. Schmidt , Quasi-decompositions, exact sequences, and triple sums of semigroups. I. General theory	365
J. Schmidt , Quasi-decompositions, exact sequences, and triple sums of semigroups. II. Applications	399
D. Schweigert , Endomorphically complete groups	429
M. Sekanina , Concrete categories with non-injective monomor- phisms	435
M. Steinby , On algebras as tree automata	441
Á. Szendrei , On affine modules	457
W. Taylor , Equational logic	465
J. Timm , On regular algebras	503
J. Varlet , Remarks on fully invariant congruences	515
H. Werner , Varieties generated by quasi-primal algebras have decidable theories	555
J. Wiesenbauer , On the polynomial completeness defect of universal algebras	577
R. Wille , On lattices freely generated by finite partially ordered sets	581
J. Žembery , Proper and improper free algebras	595
PROBLEMS	603
