Preface v

Introduction 1

0.1 Three Famous Problems 1

0.2 Straightedge and Compass Constructions 3

0.3 Impossibility of the Constructions 3

Chapter 1 Algebraic Preliminaries 7

1.1 Fields, Rings and Vector Spaces 8

1.2 Polynomials 13

1.3 The Division Algorithm 17

1.4 The Rational Roots Test 20

Appendix to Chapter 1 24

Chapter 2 Algebraic Numbers and Their Polynomials 27

2.1 Algebraic Numbers 28

2.2 Monic Polynomials 31

2.3 Monic Polynomials of Least Degree 32

Chapter 3 Extending Fields 39

3.1 An Illustration: $\mathbb{Q}(\sqrt{2})$ 40

3.2 Construction of $\mathbb{F}(\alpha)$ 44

3.3 Iterating the Construction 50

3.4 Towers of Fields 52

Chapter 4 Irreducible Polynomials 61

4.1 Irreducible Polynomials 62

4.2 Reducible Polynomials and Zeros 64

4.3 Irreducibility and $\mathrm{irr}(\alpha, \mathbb{F})$ 68

4.4 Finite-dimensional Extensions 71

Chapter 5 Straightedge and Compass Constructions **75**
5.1 Standard Straightedge and Compass Constructions 76
5.2 Products, Quotients, Square Roots 85
5.3 Rules for Straightedge and Compass Constructions 89
5.4 Constructible Numbers and Fields 93

Chapter 6 Proofs of the Impossibilities **99**
6.1 Non-Constructible Numbers 100
6.2 The Three Constructions are Impossible 103
6.3 Proving the "All Constructibles Come From Square Roots" Theorem 108

Chapter 7 Transcendence of e and π **115**
7.1 Preliminaries 116
7.2 e is Transcendental 124
7.3 Preliminaries on Symmetric Polynomials 134
7.4 π is Transcendental – Part 1 146
7.5 Preliminaries on Complex-valued Integrals 149
7.6 π is Transcendental – Part 2 153

Chapter 8 An Algebraic Postscript **163**
8.1 The Ring $\mathbf{F}[X]_{p(X)}$ 164
8.2 Division and Reciprocals in $\mathbf{F}[X]_{p(X)}$ 165
8.3 Reciprocals in $\mathbf{F}(\alpha)$ 171

Chapter 9 Other Impossibilities and Abstract Algebra **177**
9.1 Construction of Regular Polygons 178
9.2 Solution of Quintic Equations 179
9.3 Integration in Closed Form 181

Index **183**
