Preface	ix
1 Composition Method for Associative Algebras	1
1.1 Introduction	1
1.2 Free Semigroups and Free Groups	2
1.3 The Composition Lemma	5
1.4 The Composition Lemma for Semigroup Algebras	17
1.5 The Generalised Clifford Algebra and Some Other Examples	22
1.6 Finite-Dimensional Representation of a Generalised Clifford Algebra	32
1.7 More on Embeddings into Simple Algebras	35
2 Free Lie Algebras	53
2.1 Introduction	53
2.2 The Definition of Free Lie Algebras	54
2.3 Projective Algebras	55
2.4 Elementary Transformations and Automorphisms of Free Algebras	56
2.5 Lie Algebra Derivations	57
2.6 The Ideal of Codimension 1	58
2.7 Constructing Generators for an Arbitrary Subalgebra in a Free Lie Algebra	60
2.8 The Shirshov Theorem on Free Lie Algebra Subalgebras	61
2.9 Automorphisms of Free Lie Algebras of Finite Rank	64
2.10 A Criterion for a Lie Algebra to be Free	65
2.11 Bases of a Free Lie Algebra	66
2.12 Construction of Free Lie Algebras	73
2.13 Universal Enveloping Associative Algebra	74
2.14 On Subrings of Free Rings with Operators	76
2.15 Embedding Lie Rings into Associative Rings with Operators	84
2.16 Restricted Lie Algebras	86
2.17 Relatively Free Lie Algebras	90
2.18 Embedding Countable-Dimensional Lie Algebras into Lie Algebras with Two Generators	92
2.19 The Residual Finiteness of Associative and Lie Algebras	94
2.20 Residual Finiteness of Free Rings and Algebras	101

3	The Composition Method in the Theory of Lie Algebras	105
3.1	Introduction	105
3.2	The Composition Lemma	106
3.3	Formulation of Decision Problems. One-Relator Lie Algebras	111
3.4	Embedding Lie Algebras into Simple Lie Algebras	118
3.5	The Main Algorithmic Problems for Lie Algebras are Unsolvable	120
3.6	Unrecognizable Markov Properties for Finitely Presented Lie Algebras	123
3.7	Defining Relations of a Subalgebra	124
3.8	Residual Finiteness and Decision Problems	126
3.9	On Residual Finiteness of One-Relator Lie Algebras	127
3.10	Constructing Free Resolutions	131
3.11	Cohomological Dimension of Almost Free Lie Algebras	134
4	Amalgamated Products of Lie Algebras	141
4.1	Introduction	141
4.2	Definition of Amalgamated Products	142
4.3	Constructing the Free Product of Associative Algebras without 1	143
4.4	Constructing the Amalgamated Product of Lie Algebras	144
4.5	Subalgebras of the Free Product of Lie Algebras	146
4.6	Generators of a Subalgebra of the Free Product of Lie Algebras	147
4.7	Decomposition of a Free Product into the Sum of Two Subalgebras, One Free	148
4.8	Decomposition of a Subalgebra of a Free Product into the Sum of Two Subalgebras, One Free	151
4.9	The Theorem on Subalgebras of an Amalgamated Product of Lie Algebras	152
4.10	Free Subalgebras in a Free Product of Lie Algebras	155
4.11	The Case in Which the Kurosh Formula Almost Holds	159
4.12	Supplementary Facts on Free Products	163
4.13	Residual Finiteness of Free Products of Associative and Lie Algebras	167
4.14	Residual Finiteness of Free Soluble Lie Algebras with respect to Inclusion into Finitely Generated Subalgebras	171
4.15	On Residual Finiteness of Free Soluble Groups with respect to Inclusion into Finitely Generated Subgroups	172
4.16	On Residual Properties of Free Products of Lie Algebras. Central Systems in Free Products	174
5	The Problem of Endomorph Reducibility and Relatively Free Groups with the Word Problem Unsolvable	177
5.1	Introduction	177
5.2	When the Problem of Endomorph Reducibility for Relatively Free Rings is Unsolvable	178

5.3	When the Problem of Endomorph Reducibility is Solvable	182
5.4	The Problem of Endomorph Reducibility for Relatively Free Groups	185
5.5	The Variety \mathcal{R} Included in \mathcal{N}_c	188
5.6	The Free Group T of the Variety $(\mathcal{A}_2^2 \cap \mathcal{N}_2)\mathcal{A}_2\mathcal{R}$ and its Quotient Group S	197
5.7	The Main Construction	199
5.8	Application to Constructing Non-Finitely-Based Varieties	202
5.9	An Interpretation of Polynomials	203
5.10	Unsolvability of Some Algorithmic Problems in the Theory of Group	206
6	The Constructive Method in the Theory of HNN-extensions. Groups with Standard Normal Form	209
6.1	Introduction	209
6.2	Novikov-Boone Groups	209
6.3	The Novikov Lemma and the Britton Lemma	215
6.4	The Definition of Groups with Standard Normal Form	218
6.5	The Novikov Group $\mathcal{A}_{p_1 p_2}$	222
6.6	The Boone Group	228
7	The Constructive Method for HNN-extensions and the Conjugacy Problem for Novikov-Boone Groups	237
7.1	Introduction	237
7.2	The Conjugacy Problem for the Group G_1	240
7.3	The Group G_2	256
7.4	Some Calculuses	262
7.5	The Conjugacy Problem for the Group $\mathcal{A}_{p_1 p_2}$	276
7.6	Auxiliary facts	309
Appendix 1	Calculations in Free Groups	315
A1.1	The Hall Identities	315
A1.2	Generators of the Commutant of a Free Group	315
A1.3	Generators for the Terms of the Lowest Central Series	323
Appendix 2	Algorithmic Properties of the Wreath Products of Groups	325
A2.1	Embeddings	325
A2.2	Groups of Type F/N'	327
A2.3	When the Conjugacy Problem for a Wreath Product is Solvable	330
A2.4	When the Conjugacy Problem for the Groups of Type F/N' is Solvable	334
Appendix 3	Survey of the Theory of Absolutely Free Algebras	335
A3.1	Introduction	335
A3.2	Free Groupoids	335

A3.3 Constructing a Free Algebra	337
A3.4 Subalgebras of Free Algebras	337
A3.5 Properties of Subalgebras of a Free Algebra	338
A3.6 The Word Problem for \mathcal{E} -algebras	340
A3.7 Properties of Ideals of a Free Algebra	343
A3.8 Elementary Theories of Free Algebras	346
A3.9 Endomorphisms and Automorphisms of Free Algebras	347
Bibliography	349
Index	380
