

CONTENTS

Preface		v
Chapter 1	TENSOR SPACES	
1.1.	Multilinear Functions	1
	Kronecker product, dual basis, products of linear functionals	
	Exercises	
1.2.	Free Spaces, Factor Spaces, Tensor Products	10
	canonical injection, quotient space, tensor product, universal factorization, decomposable tensors	
	Exercises	
1.3.	Properties of Tensor Spaces	21
	tensor product of subspaces, direct sums, bases, dual product space	
	Exercises	
1.4.	Contraction, Extension, Inner Product	36
	covariant and contravariant tensors, contraction of tensors, extension of the underlying field, sesquilinear functional, orthonormal bases	
	Exercises	
Chapter 2	TRANSFORMATIONS ON TENSOR SPACES	
2.1.	Tensor Products of Transformations	52
	rank, matrix representation, Kronecker product, invariant subspace, direct sum	
	Exercises	

2.2.	Properties of Mappings on Tensor Spaces	67
	triangular basis, normal tensor products, permutation operator, symmetrizer	
	Exercises	
2.3.	Symmetry Classes	87
	symmetric multilinear function, symmetry class of tensors, decomposable elements in a symmetry class, bases in symmetry classes, various models of symmetry classes	
	Exercises	
2.4.	Induced Transformations	116
	tensor power, compound, induced power, properties of induced transformations, generalized matrix function, induced matrix, Jacobi theorem, Sylvester-Franke theorem, exterior space over V , Grassmann space over V , completely symmetric space over V , inner product of decomposable elements, equality of induced transformations, Cartan's Lemma	
	Exercises	
Chapter 3	TENSOR ALGEBRAS	
3.1.	The Mixed Graded Tensor Algebra	160
	ideals, generating sets, graded vector space, graded algebra, homogeneous elements, homogeneous subspace, homogeneous linear transformation, mixed graded tensor algebra, contravariant and covariant tensor algebras, Grassmann or exterior algebra, symmetric algebra, universal properties, spanning sets for the symmetric algebra	
	Exercises	
3.2.	Derivations	209
	induced derivation, partial derivation, partition polynomial, eigenvalues of partial derivations, bisymmetric transformations, linear determinant, Pfaffian	
	Exercises
