Preface	v
Contents of Part I	xv
Chapter 4 THE GRASSMANN ALGEBRA	
4.1 Decomposability	1
Plücker coordinates, quadratic Plücker relations, Hodge star operator, supplementary compound, symplectic transformation	
Exercises	
4.2 Duality in Exterior Algebras	61
sesquilinear functions, dual spaces, complete contraction, exterior forms, interior product, enveloping space, exterior equations, curvature operator, Grassmann manifold	
Exercises	
4.3 Transformations on the Grassmann Algebra	130
Laplace expansion, Theorem of Bellavitis, Reiss matrix, systems of exterior equations, basis theorem	
Exercises	
Chapter 5 CLIFFORD ALGEBRAS	
5.1 Compatible Algebras	165
Pauli matrices, Clifford algebras, symmetrized product, quaternion algebras, main involution, main antiautomorphism	
Exercises	
5.2 The Structure of Clifford Algebras	205
ideals in a Clifford algebra, spinors	
Exercises	

5.3 Orthogonal Groups 267

isometry, isometric embedding, orthogonal group, reflection, versor, Clifford group, vector representation

Exercises

Chapter 6 REPRESENTATION THEORY

6.1 Rational Representations 295

tensor representations, rational and integral representations, polynomial representations, reducibility, absolute irreducibility, Maschke's Theorem, Schur's Lemma, Frobenius-Schur Theorem

Exercises

6.2 The Regular Representation 380

representation of matrix algebras, reducibility of tensor representations, idempotents in a group algebra, character orthogonality relations

Exercises

6.3 The Symmetric Group 468

class constant equations, character tables, Young diagrams, Young symmetrizers, standard diagrams, Young induced transformations, reductive representations, bracket notation, invariant theory

Exercises

Chapter 7 INVARIANTS OF TENSOR PRODUCTS

7.1 Elementary Divisors of $T \otimes S$ 545

elementary divisors, elementary divisors of compounds, elementary divisors of induced transformations

Exercises

7.2 Elementary Divisors of Derivations 588

partial derivations, elementary divisors of linear derivations, elementary divisors of $\text{Ad } A$, Taussky-Wielandt Theorem

Exercises

7.3	Further Results on Derivations linearity of elementary divisors Exercises	624
Chapter 8	A SUMMARY OF SPECIAL TOPICS	
8.1	Symmetry Classes higher degree symmetry classes, general graded algebras	651
8.2	Mappings on Symmetry Classes mappings that preserve decomposibility	655
8.3	Inequalities the use of multilinear algebra in proving matrix inequalities, generalized numerical range	660
8.4	Combinatorial Applications inequalities for incidence matrices, group actions, symmetry, isomorph rejection, the Pölya counting theorem	666
