

CONTENTS

1. Definitions and Fundamental Properties	1
1. Definitions	1
2. Characterizations	4
3. Properties	7
4. Operator Theory	9
Exercises	10
2. Pseudoinverses of Sums and Products	12
1. The Pseudoinverse of Products	12
2. The Pseudoinverse of a Partitioned Matrix	13
3. The Pseudoinverse of Sums	16
Exercises	18
3. Generalized Inverses with Spectral Properties	20
1. Introduction	20
2. Spectral Inverses	21
3. Strong Spectral Inverses	29
Exercises	29
4. Special Topics	31
1. Range-Hermitian Matrices	31
2. Partial Isometrics	33
3. Differentiable Generalized Inverses	38
Exercises	41

5. Solving Systems of Linear Equations	42
1. Introduction	42
2. The Concept of a $p - q$ Generalized Inverse	43
3. Common Solutions for n Matrix Equations	48
Exercises	49
6. Applications	50
1. Statistical Applications	50
1.1. <i>Sequential Least Squares Parameter Estimation</i>	50
<i>The Sequential Algorithm</i>	51
<i>Weighted Estimation</i>	52
<i>Deleting Observations</i>	53
1.2. <i>Distribution Theory</i>	54
1.3. <i>The Independence of Quadratic Forms in Normal Variates</i>	55
1.4. <i>The Fixed Point Probability Vector of Regular or Ergodic Transition Matrices</i>	61
1.5. <i>Stochastic Matrices</i>	63
2. Other Applications	65
2.1. <i>The Algebraic Eigenvalue Problem</i>	65
2.2. <i>Incidence Matrices</i>	66
Exercises	69
Appendix 1. Computing Techniques	71
1. A Direct Method	71
2. An Iterative Method	74
Appendix 2. Notes and Comments	77
References	81
Index	103
