Contents

Chapter 0. Prerequisites 1

Chapter I. Vector spaces 5
§ 1. Vector spaces 5
§ 2. Linear mappings 16
§ 3. Subspaces and factor spaces 22
§ 4. Dimension 32
§ 5. The topology of a real finite dimensional vector space 37

Chapter II. Linear mappings 41
§ 1. Basic properties 41
§ 2. Operations with linear mappings 51
§ 3. Linear isomorphisms 55
§ 4. Direct sum of vector spaces 56
§ 5. Dual vector spaces 63
§ 6. Finite dimensional vector spaces 76

Chapter III. Matrices 83
§ 1. Matrices and systems of linear equations 83
§ 2. Multiplication of matrices 89
§ 3. Basis transformation 92
§ 4. Elementary transformations 95

Chapter IV. Determinants 99
§ 1. Determinant functions 99
§ 2. The determinant of a linear transformation 104
§ 3. The determinant of a matrix 109
§ 4. Dual determinant functions 112
§ 5. The adjoint matrix 114
§ 6. The characteristic polynomial 120
§ 7. The trace 126
§ 8. Oriented vector spaces 131

Chapter V. Algebras 144
§ 1. Basic properties 144
§ 2. Ideals 158
§ 3. Change of coefficient field of a vector space 163

Chapter VI. Gradations and homology 167
§ 1. G-graded vector spaces 167
§ 2. G-graded algebras 174
§ 3. Differential spaces and differential algebras 178

Chapter VII. Inner product spaces 186
§ 1. The inner product 186
§ 2. Orthonormal bases 191

§ 3. Normed determinant functions 195
§ 4. Duality in an inner product space 202
§ 5. Normed vector spaces 205
§ 6. The algebra of quaternions 208
Chapter VIII. Linear mappings of inner product spaces 216
§ 1. The adjoint mapping 216
§ 2. Selfadjoint mappings 221
§ 3. Orthogonal projections 226
§ 4. Skew mappings 229
§ 5. Isometric mappings 232
§ 6. Rotations of Euclidean spaces of dimension 2, 3 and 4 237
§ 7. Differentiable families of linear automorphisms 249

Chapter IX. Symmetric bilinear functions 261
§ 1. Bilinear and quadratic functions 261
§ 2. The decomposition of E 265
§ 3. Pairs of symmetric bilinear functions 272
§ 4. Pseudo-Euclidean spaces 281
§ 5. Linear mappings of Pseudo-Euclidean spaces 288

Chapter X. Quadrics 296
§ 1. Affine spaces 296
§ 2. Quadrics in the affine space 301
§ 3. Affine equivalence of quadrics 310
§ 4. Quadrics in the Euclidean space 316

Chapter XI. Unitary spaces 325
§ 1. Hermitian functions 325
§ 2. Unitary spaces 327
§ 3. Linear mappings of unitary spaces 334
§ 4. Unitary mappings of the complex plane 340
§ 5. Application to Lorentz-transformations 345

Chapter XII. Polynomial algebra 351
§ 1. Basic properties 351
§ 2. Ideals and divisibility 357
§ 3. Factor algebras 366
§ 4. The structure of factor algebras 369

Chapter XIII. Theory of a linear transformation 383
§ 1. Polynomials in a linear transformation 383
§ 2. Generalized eigenspaces 390
§ 3. Cyclic spaces 397
§ 4. Irreducible spaces 402
§ 5. Application of cyclic spaces 415
§ 6. Nilpotent and semisimple transformations 425
§ 7. Applications to inner product spaces 436

Bibliography 445
