

CONTENTS

Preface	xi
--------------------------	----

PART I

Chapter 1	Learning to Think with Arrows	
1.1	Epimorphisms and Monomorphisms	1
1.2	Products and Coproducts	9
1.3	Coequalizers and Equalizers	16
Chapter 2	Basic Concepts of Category Theory	
2.1	Vector Spaces and Posets	24
2.2	The Definition of a Category	29
2.3	Epimorphisms and Monomorphisms	33
2.4	Limits and Colimits	41
Chapter 3	Monoids and Groups	
3.1	Defining the Categories	51
3.2	Constructions within the Categories	54
Chapter 4	Metric and Topological Spaces	
4.1	Categories of Metric Spaces	60
4.2	Constructions in Categories of Metric Spaces	64
4.3	Topological Spaces	69
Chapter 5	Additive Categories	
5.1	Vectors and Matrices in a Category	74
5.2	Abm-Categories	77
Chapter 6	Structured Sets	
6.1	The Admissible Maps Approach to Structure	85
6.2	Optimal Families	88
6.3	Examples from Automata Theory	93

PART II

Chapter 7	Functors and Adjoint	
7.1	Functors	107
7.2	Free and Cofree	111
7.3	Natural Transformations and Adjunctions	120
Chapter 8	The Adjoint Functor Theorem	
8.1	Necessary Conditions	131
8.2	Sufficient Conditions	134
Chapter 9	Monoidal and Closed Categories	
9.1	Motivation from Set Theory	139
9.2	Monoids in a Monoidal Category	144
9.3	Categories over a Monoidal Category	149
9.4	The Godement Calculus	152
Chapter 10	Monads and Algebras	
10.1	Universal Algebra	157
10.2	From Monoids to Monads	163
10.3	Monads from Free Algebras	168
	Suggestions for Further Reading	176
	Index	178
