

## CONTENTS

PREFACE	iii
<i>Chapter 1</i>	
ALGEBRAIC AND ANALYTIC PRELIMINARIES	
1. Notation	1
2. Background	1
3. Similarity and Similarity Invariants	2
4. How is Similarity Used in Solving Problems?	5
5. Diagonable Matrices	6
6. Jordan Matrices	10
7. Using the Similarity Method on Arbitrary Matrices: The Cayley-Hamilton Theorem, Evaluation of Matrix Polynomials	13
8. The Question of Uniqueness of the Jordan Form	23
9. Finding the Jordan Form	25
10. Sequences of Matrices	35
11. Powers of Matrices	36
12. Series of Matrices	40
13. Power Series: The Lagrange-Sylvester Theorem	41
14. Matrix Functions and Extensions of Scalar Functions	46
15. Extension of Scalar Identities	48
16. Evaluation of Matrix Functions	54
17. The Minimal Polynomial Reviewed	58
<i>Chapter 2</i>	
NONNEGATIVE MATRICES	
1. Introduction and Definitions	63
2. The Basic Theory of Positive Matrices	70
3. Powers of Positive Matrices	74
4. An Application	76
5. Primitive Matrices	78

6.	A Test for Primitivity	81
7.	Primitive Matrices: Applications	81
8.	A Generalization of Perron's Theorem	84
9.	(Homogeneous) Markov Chains and Stochastic Matrices	86
10.	Indecomposable Matrices	98

### Chapter 3

#### DIFFERENTIAL EQUATIONS

1.	Matrix-Valued Functions of One Scalar Variable	118
2.	A Matrix Norm	121
3.	Linear Scalar Differential Equations	122
4.	Homogeneous Differential Equations: The Fundamental Matrix	125
5.	Inhomogeneous Differential Equations	143
6.	The Matrix Function $e^{At}$ : The Laplace Transform	145
7.	Logarithms and Arbitrary Powers of a Matrix	158
8.	Stability	168
9.	Stability When $A$ is Constant	172
10.	Indirect Tests for Stability: Lyapunov's Theorem	174
11.	Lyapunov Transformations: Stability When $A(t)$ is Periodic	180
12.	Two Physical Examples of Stability	185

### Chapter 4

#### LOCATION AND ESTIMATION OF EIGENVALUES

1.	An Inner Product in $\underline{C}^k$	199
2.	Unitary Matrices and Orthonormal Bases	200
3.	Schur's Theorem	203
4.	Eigenvalues of Hermitian Matrices	207
5.	Bounds for the Eigenvalues of Arbitrary Matrices: Estimating the Spectral Radius	209
6.	Regions Containing the Eigenvalues of a Matrix: Gersgorin's Theorem	213
7.	An Application of Gersgorin's Theorem: Ky Fan's Theorem	219
8.	Generalizations of Gersgorin's Theorem: Ostrowski's Theorem	221

Miscellaneous Exercises	228
References	233
Notation	235
Index	237
