

CONTENTS

Preface	ix
Chapter 1 SYSTEMS OF LINEAR EQUATIONS	1
1 Gaussian Elimination	2
2 A Matrix Method for Solving Systems of Equations	7
3 Sets of Solutions	17
4 Geometry and Solutions	27
5 Existence and Uniqueness of Solutions; Rank	34
6 Applications	38
Review	45
Chapter 2 VECTOR SPACES AND SUBSPACES	49
7 Definition of Vector Space	50
8 Proving Vector Space Laws	57
9 Other Examples of Vector Spaces	62
10 Subspaces	66
11 Applications	73
Review	78

Chapter 3	VECTOR SPACES AND DIMENSION	83
12	Spanning	84
13	Independence	92
14	Bases and Dimension	100
15	Systems of Equations and Dimension	106
16	Coordinates	111
17	Functions	115
18	Isomorphism	121
19	Applications	125
	Review	128
Chapter 4	LINEAR TRANSFORMATIONS	133
20	Linear Transformations	134
21	The Matrix of a Linear Transformation	146
22	Matrix Multiplication and Products of Linear Transformations	156
23	Inverses	165
24	Determinants	177
25	Applications	188
	Review	199
Chapter 5	THE SIMPLIFICATION OF MATRICES; EIGENVALUES AND EIGENVECTORS	205
26	Matrices Relative to Different Bases	206
27	Coordinates	214
28	The Relationship between the Usual Matrix and a New Matrix for a Linear Transformation	220
29	Eigenvalues and Eigenvectors	227
30	Finding Eigenvalues and Eigenvectors	232
31	Applications	243
	Review	254
Chapter 6	EUCLIDEAN GEOMETRY IN VECTOR SPACES	259
32	Length and Distance	260
33	Perpendicularity and Angles	265
34	Projections	272
35	Orthonormal Bases	286
36	Inner Product Spaces	299
37	Applications	306
	Review	312
	Answers to Selected Exercises	317
	Index	335
