<b>1</b>	<b>Examples and Representations</b> . . . . .	1
1.1	Examples and Control Problems . . . . .	1
1.1.1	Long-wall Coal Cutting . . . . .	1
1.1.2	Metal Rolling as a Repetitive Process . . . . .	7
1.2	A General Abstract Representation . . . . .	11
1.3	2D and 1D Discrete Linear Systems Equivalent Models . . . . .	26
1.4	2D Transfer-Function and Related Representations . . . . .	33
<b>2</b>	<b>Stability – Theory, Tests and Performance Bounds</b> . . . . .	41
2.1	Asymptotic Stability . . . . .	41
2.2	Stability Along the Pass . . . . .	55
2.3	Stability Tests and Performance Bounds . . . . .	66
2.4	Stability of Discrete Processes via 2D Spectral Methods . . . . .	78
<b>3</b>	<b>Lyapunov Equations for Discrete Processes</b> . . . . .	85
3.1	The 1D Lyapunov Equation . . . . .	85
3.2	The 2D Lyapunov Equation . . . . .	98
3.2.1	Stability and the 2D Lyapunov Equation . . . . .	98
3.2.2	An Alternative 2D Lyapunov Equation . . . . .	105
3.2.3	Solving the 2D Lyapunov Equation . . . . .	112
<b>4</b>	<b>Lyapunov Equations for Differential Processes</b> . . . . .	117
4.1	The 1D Lyapunov Equation . . . . .	117
4.2	The 2D Lyapunov Equation . . . . .	128
4.3	Differential Processes with Dynamic Boundary Conditions . . . . .	130
<b>5</b>	<b>Robustness</b> . . . . .	141
5.1	Discrete Processes . . . . .	141
5.1.1	Background . . . . .	141
5.2	Methods for Exactly Calculating the Stable Perturbation Bound . . . . .	142
5.3	Nonnegative Matrix Theory Approach . . . . .	156
5.4	LMI Based Approaches . . . . .	164
5.4.1	Discrete Processes . . . . .	164
5.4.2	Differential Processes . . . . .	168

<b>6</b>	<b>Controllability, Observability, Poles and Zeros</b> .....	177
6.1	Controllability For Discrete Processes .....	177
6.1.1	2D Discrete Linear Systems .....	177
6.1.2	The Transition Matrix Sequence for Discrete Linear Repetitive Processes .....	181
6.1.3	The General Response Formula .....	184
6.1.4	Local Reachability/Controllability .....	187
6.1.5	Controllability of Discrete Processes with Dynamic Boundary Conditions .....	191
6.2	Controllability and Observability of Differential Processes ...	195
6.2.1	Controllability .....	195
6.2.2	Point Controllability .....	202
6.2.3	Sufficient Conditions for Approximate Reachability and Controllability .....	204
6.2.4	Observability and Control Canonical Forms .....	208
6.3	System Equivalence .....	209
6.4	Poles and Zeros – A Behavioral Approach .....	220
6.4.1	Behavioral Theory – Background .....	220
6.4.2	Characteristic Varieties .....	224
6.4.3	Generalized Characteristic Varieties .....	225
6.4.4	Poles and Zeros in the Behavioral Setting .....	227
<b>7</b>	<b>Feedback and Optimal Control</b> .....	235
7.1	Control Objectives and Structures .....	235
7.1.1	Control Objectives .....	235
7.1.2	Control Laws .....	237
7.2	Design of Memoryless Control Laws .....	245
7.2.1	Fast Sampling Control of a Class of Differential Linear Repetitive Processes .....	247
7.2.2	Discrete Multivariable First Order Lag based Control Law Design .....	250
7.2.3	An Extension .....	253
7.3	LMI based Control Law Design for Stability Along the Pass .	258
7.3.1	Discrete Processes .....	258
7.3.2	Discrete Processes with Dynamic Boundary Conditions	266
7.3.3	Differential Processes .....	269
7.4	Design for Performance and Disturbance Rejection .....	270
7.4.1	Asymptotic Stability with Performance Design .....	272
7.4.2	Stability Along the Pass with Performance Design ...	273
7.4.3	Design for Disturbance Rejection .....	276
7.5	PI Control Laws .....	280
7.5.1	Asymptotic Stability Using the 1D Equivalent Model for Discrete Processes .....	280
7.5.2	Stability Along the Pass with Performance for Discrete Processes .....	282

7.5.3	Differential Processes . . . . .	287
7.6	Direct Application of Delay Differential Stability Theory to Differential Processes . . . . .	290
7.7	Linear Quadratic Control of Differential Processes . . . . .	296
<b>8</b>	<b>Control Law Design for Robustness and Performance . . . . .</b>	<b>305</b>
8.1	LMI Based Design . . . . .	305
8.1.1	Discrete Processes . . . . .	305
8.1.2	Differential Processes . . . . .	307
8.2	$H_\infty$ Control of Discrete Processes . . . . .	308
8.2.1	$H_\infty$ Control with a Static Control Law . . . . .	311
8.2.2	$H_\infty$ Control of Uncertain Discrete Processes . . . . .	312
8.2.3	$H_\infty$ Control with a Dynamic Pass Profile Controller . . . . .	316
8.3	Guaranteed Cost Control of Discrete Processes . . . . .	326
8.3.1	Guaranteed Cost Bound . . . . .	327
8.3.2	Guaranteed Cost Control . . . . .	329
8.4	$H_\infty$ Control of Differential Processes . . . . .	333
8.4.1	$H_\infty$ Control with a Static Control Law . . . . .	335
8.4.2	$H_\infty$ Control of Uncertain Differential Processes . . . . .	336
8.4.3	$H_\infty$ Control with a Dynamic Pass Profile Controller . . . . .	338
8.5	Guaranteed Cost Control of Differential Processes . . . . .	346
8.5.1	Guaranteed Cost Bound . . . . .	347
8.5.2	Guaranteed Cost Control . . . . .	349
8.6	$H_2$ and Mixed $H_2/H_\infty$ Control of Differential Processes . . . . .	355
8.6.1	The $H_2$ Norm and Stability Along the Pass . . . . .	355
8.6.2	Static $H_2$ Control Law Design . . . . .	358
8.6.3	The Mixed $H_2/H_\infty$ Control Problem . . . . .	360
8.6.4	$H_2$ Control of Uncertain Processes . . . . .	362
<b>9</b>	<b>Application to Iterative Learning Control . . . . .</b>	<b>369</b>
9.1	Stability and Convergence of ILC Schemes . . . . .	369
9.2	Norm Optimal ILC . . . . .	378
9.3	Norm Optimal ILC Applied to Chain Conveyor Systems . . . . .	386
9.3.1	Experimental Results . . . . .	394
9.4	Robust ILC . . . . .	405
9.5	Experimental Verification of Robust ILC on a Gantry Robot . . . . .	411
9.5.1	Model uncertainty – Case (i) . . . . .	417
9.5.2	Model uncertainty – Cases (ii) and (iii) . . . . .	420
9.5.3	Robustness to initial state error . . . . .	423
9.5.4	Long-term performance . . . . .	424

<b>10 Conclusions and Further Work</b> .....	427
10.1 Conclusions .....	427
10.2 Further Research .....	433
10.2.1 Repetitive Processes with Switching Dynamics .....	433
10.3 Spatially Interconnected Systems – a Role for Repetitive Processes? .....	436
