|---|-----|
| Preface | vii |
| Chapter 1. Introduction | 1 |
| 1.1 Motivating applications | 1 |
| 1.2 Discrete orthogonal polynomials | 8 |
| 1.3 Assumptions | 10 |
| 1.4 Goals and methodology | 11 |
| 1.5 Outline of the rest of the book | 22 |
| 1.6 Research background | 23 |
| Chapter 2. Asymptotics of General Discrete Orthogonal Polynomials in the Complex Plane | 25 |
| 2.1 The equilibrium energy problem | 25 |
| 2.2 Elements of hyperelliptic function theory | 31 |
| 2.3 Results on asymptotics of discrete orthogonal polynomials | 33 |
| 2.4 Equilibrium measures for some classical discrete orthogonal polynomials | 41 |
| Chapter 3. Applications | 49 |
| 3.1 Discrete orthogonal polynomial ensembles and their particle statistics | 49 |
| 3.2 Dual ensembles and hole statistics | 51 |
| 3.3 Results on asymptotic universality for general weights | 52 |
| 3.4 Random rhombus tilings of a hexagon | 57 |
| 3.5 The continuum limit of the Toda lattice | 60 |
| Chapter 4. An Equivalent Riemann-Hilbert Problem | 67 |
| 4.1 Choice of Δ : the transformation from $\mathbf{P}(z; N, k)$ to $\mathbf{Q}(z; N, k)$ | 67 |
| 4.2 Removal of poles in favor of discontinuities along contours: the transformation from $\mathbf{Q}(z; N, k)$ to $\mathbf{R}(z)$ | 69 |
| 4.3 Use of the equilibrium measure: the transformation from $\mathbf{R}(z)$ to $\mathbf{S}(z)$ | 70 |
| 4.4 Steepest descent: the transformation from $\mathbf{S}(z)$ to $\mathbf{X}(z)$ | 78 |
| 4.5 Properties of $\mathbf{X}(z)$ | 79 |
| Chapter 5. Asymptotic Analysis | 87 |
| 5.1 Construction of a global parametrix for $\mathbf{X}(z)$ | 87 |
| 5.2 Error estimation | 99 |
| Chapter 6. Discrete Orthogonal Polynomials: Proofs of Theorems Stated in §2.3 | 105 |
| 6.1 Asymptotic analysis of $\mathbf{P}(z; N, k)$ for $z \in \mathbb{C} \setminus [a, b]$ | 105 |
| 6.2 Asymptotic behavior of $\pi_{N,k}(z)$ for z near a void of $[a, b]$: the proof of Theorem 2.9 | 107 |
| 6.3 Asymptotic behavior of $\pi_{N,k}(z)$ for z near a saturated region of $[a, b]$ | 108 |
| 6.4 Asymptotic behavior of $\pi_{N,k}(z)$ for z near a band | 110 |
| 6.5 Asymptotic behavior of $\pi_{N,k}(z)$ for z near a band edge | 112 |
| Chapter 7. Universality: Proofs of Theorems Stated in §3.3 | 115 |
| 7.1 Relation between correlation functions of dual ensembles | 115 |

| | | |
|---|--|-----|
| 7.2 | Exact formulae for $K_{N,k}(x, y)$ | 118 |
| 7.3 | Asymptotic formulae for $K_{N,k}(x, y)$ and universality | 124 |
| Appendix A. The Explicit Solution of Riemann-Hilbert Problem 5.1 | | 135 |
| A.1 | Steps for making the jump matrix piecewise-constant: the transformation from $\check{\mathbf{X}}(z)$ to $\mathbf{Y}^\sharp(z)$ | 135 |
| A.2 | Construction of $\mathbf{Y}^\sharp(z)$ using hyperelliptic function theory | 137 |
| A.3 | The matrix $\check{\mathbf{X}}(z)$ and its properties | 141 |
| Appendix B. Construction of the Hahn Equilibrium Measure: the Proof of Theorem 2.17 | | 145 |
| B.1 | General strategy: the one-band ansatz | 145 |
| B.2 | The void-band-void configuration | 146 |
| B.3 | The saturated-band-void configuration | 149 |
| B.4 | The void-band-saturated configuration | 150 |
| B.5 | The saturated-band-saturated configuration | 151 |
| Appendix C. List of Important Symbols | | 153 |
| Bibliography | | 163 |
| Index | | 167 |
